NEPTUNALIA, Festivals celebrated by the Antients in Honour of Neptune.

NEPTUNE [of *nando*, i. e. swimming, or of *nubendo*, L. i. e. covering, because the Sea covers the Earth or as others say, from the Lybian, or the Egyptian Word *nephia*, signifying Capes, Promontories, and the Wastes or Extremities of the Ground or Sea.] The Greeks call him *Ποσειδών*, from the Phœnician Word *Posedoni*, a breaker or destroyer of Ships, Neptune was one of the Children of Saturn, who at the Division of the World, among him and his Brethren, had the Command of the Sea allotted to him: His Scepter was a Trident; he bears a Trident instead of a Scepter, because Fishermen in fishing make frequent use of a Trident; or because this three forked Instrument is very apt or fit for stirring the Earth. And his Chariot a great Sea-Shell, drawn either by Whales or Sea Monsters, or by Horses, whose lower Parts were those of a Fish. His Wife was called *Amphitrite*, because the Sea does compass the Earth. He is feigned to have taught Men the use of an Horse, which he caused to come forth of the Earth, by a blow of his Trident, at the Dispute that he had with *Minerva*, about giving a Name to the City of Athens, in the *Areopagus*, as an Olive-Tree did from *Minerva's* striking the Rock with her Spear: But because he had engag'd himself in a Conspiracy against *Jupiter*, he was confin'd to the Earth, and being under strait Circumstances, was necessitated to offer himself to the Service of *Laomedon*, to help him to build the City of Troy. The *Tritons*, which were half Men and half Dolphins, were his Children, who attended him, sounding Shell-Trumpets. By his Conversation with the Earth, he begot the *Harpies*, Monsters that had the Faces of Maids, but Bodies like Vultures, with Wings, and Claws on their Hands and Feet, and whatever they touch'd was infected and spoiled; and whatsoever came near them they stole.

Neptune was a God in great Esteem with the Romans, not only as they thought him to have the Command of one of the Elements; but because, they say, he advised them, in the first beginning of their Empire, when there was a scarcity of Women in the City, to steal the *Sabine Virgins*. He was called *Hippius* and *Equester*, because he taught Men the Use of Horses, and in acknowledgment of the Benefit that their Empire had received from Horses, they instituted Horse-Races in honour of him. He had a famous Temple in Rome, enrich'd with the Spoils of many Sea Victories; but *Augustus* the Emperor, caused his Statue to be pulled down, because he was thought to have raised a Tempest against him at Sea, where he was like to have been drowned.

So that *Neptune* is the same with that Power and Virtue, which is contained in Moisture.

Neptune is called *Ποσειδών*, because all things which the Earth produces are done by the power and efficacy of Moisture. He is also called *Εννεχθον*, *Σεισχυθον*, *Ενοσίχτων* and *Τριαντοχάιν*, all which Epithets signify a mover of the Earth. For the Spirit which is in the Bowels of the Earth, being pent up in narrow Streights, seek for a Passage out, and bursting out, they move and break the Earth. And that Eruption sometimes makes a bellowing.

NEPTUNE [in Painting, &c.] is represented clad in a Mantle of Blue or Sea Green, trimmed with Silver, with long hoary Hair, riding in a blue Chariot, drawn by monstrous Fishes, or else on the Back of a Dolphin, holding in his Hand a silver Trident.

NEREIDS [the Daughters of *Nereus*] Mermaids or Fishes the upper Part of which resembles a beautiful Woman, and the rest a Fish.

NEREUS [of *nereus*, Gr.] one of the poetical Deities of the Sea; the Son of *Oceanus* and *Tethys*, who married his Sister *Doris*, and whom they make to have fifty Daughters, called *Nereides*. The Moral of which Fable is fifty particular Seas, being Parts of the main Sea itself.

NEREUS, is the Sea. It is derived of *νέρεω*, i. e. of swimming, because we swim through the Sea. They represent *Nereus* as an old Man, because the Froth of the Sea represents hoary-headedness. For *Leucothoe*, who is the Daughter of *Nereus*, intimates something of that matter, as much as to say the whiteness of Froth.

NERGAL [i. e. in the Samaritan Language, a Cock] an Idol of the Sun, brought into Samaria from Persia, and worshipped in the Form of a Cock.

NERGAL [נרגל, Heb.] a continual Fire, which the Persian Magi preserved upon an Altar in honour of the Sun, and the Lights of the Firmament. This Fire was always kept burning, like the Vestal Fire of the Romans; whensoever they meddled with this Fire, they used to sing Hymns in honour of the Sun. The Jewish Writers affirm, that this was the God adored in Ur of the Chaldees, and that *Abraham* was obliged to quit that Country, because he would not conform to that Idolatry. The Persians were wont to dedicate to the Sun a Chariot and Horses, and to adore that glorious Light every Morning. The Mahometans do still seem to perform some kind of Devotion to the rising of the Sun, saluting aforesaid as they see it with great humility, and purifying themselves by washing. The Chaldeans were wont to burn themselves in honour of *Nergal*. And *Curtius* tells us, that *Alexander* was an Eye-Witness of this Madness. The Persian to be thus sacrificed took his farewell of his Friends in a publick Banquet; and after he was reduced to Ashes (some Writers say) the cunning Priests caused the Devil to appear in his Shape to his Acquaintance, and relate to them strange Stories of the other World.

NERION [Botany] the Rose Laurel.

NEROLY, a sort of Perfume.

NERVAL Bones [with *Anatomists*] the Bones of the hinder Part of the Head.

NERVOSE } [*nervosus*, L.] sinewy, strongly made in
NERVOUS } Body.

NERVOUSNESS, fulness of nerves, finewiness, strength, &c.

NERVOUS Juice or *Spirit*, is a pure, subtil, volatile Humour, commonly called the Animal Spirits; secreted from the arterial Blood in the cortical Part of the Brain, collected in the *medulla oblongata*, and driven thence by the force of the Heart, into the Cavities of the Nerves, to be by them convey'd throughout the Body, for the purposes of Sensation and Animal Motion.

NERVE [*nervus*, L.] or Sinew, a white, round, long Body, composed of several Threads or Fibres; deriving its origin from the Brain or the spinal Marrow; and distributed thro' all the Parts of the Body; serving for the Conveyance of the Animal Spirits, for the performance of Sensation and Motion.

NERVE [with Botan.] a long Filament or tough String, which runs across or length ways in the Leaf of a Plant; as in Plantane, &c.

Olfactory NERVES, call'd by Anatomists *Par Olfactorium*, i. e. the olfactory Pair, arise in the fore Part of the Brain a little below the *Os Frontis*, and are pretty thick near the *Os Cribrosum*, and are there called *Processus Papillares*; when they have made their way through the *Os Cribrosum*, they are distributed throughout the Membranes of the Nose; their use being in the sensation of Smelling.

Optick NERVES [Anatomy] are Nerves which pass through the Scull, in two Perforations of the Basis of it, a little above the *Sella Equina*, from whence they proceed to the Tunicks of the Eye, whereof the *Retina*, which is supposed to receive the Objects of Vision, is an extension of the inner or medullary Part alone.

Pathetick NERVES [Anat.] are certain Nerves which arise behind the Testes, and pass out of the Skull at the same Foramen of the former Pair, and spend themselves wholly on the trochlear Muscle.

Intercostal NERVES [Anatomy] are compos'd of nervous Filaments, deriv'd partly from the Brain, viz. the Branches of the fifth and sixth Pair, and partly from the Spinal Marrow, by those Branches they receive from the vertebral Nerves.

Cervical NERVES [Anat.] these consist of seven Pair, the first and second Pair arise between the first and second Vertebra of the Neck; the second Pair contributes the main Branch towards the formation of the *diaphragmatick Nerves*; the three last Pair of the Neck, joining with the two first of the *Dorsum* or *Thorax*, make the *Brachial Nerves*.

Dorsal NERVES [*Anat.*] are twelve in Number, these contribute to the *Brachial Nerves* all, except the two upper Pair, and are generally distributed into the intercostal and abdominal Muscles, the *Pleura*, and the external Parts of the *Thorax*.

The **Lumbal NERVES** [*Anat.*] of these there are five Pair, the first of which sends two Branches to the lower side of the Diaphragm; the second, some Twigs to the genital Parts; and others, as well as the three following, to give the first Roots to the *crural Nerves*. The rest of the Branches of the lumbal Nerves, are distributed into the Muscles of the Loins adjacent Parts.

Brachial NERVES [*Anat.*] are produced partly from the *Cervical*, and partly from the *Dorsal*. After the several Branches whereof these Nerves are composed, have been variously compleated and united, they run a little way in a Trunk, and then divide again into several Branches, and are variously distributed into the Muscles of the Skin and Arms.

The **Crural NERVES** [*Anat.*] are compos'd of an Union of six or seven Pair, viz. the three last of the *Lumbal*, and the three or four first of the *Os Sacrum*. This is the largest and firmest Trunk in the Body. These spend their upper Branches on the Muscles of the Thigh and Skin, as far as to the Knee, and then proceed in a Trunk downwards, which sends forth its Branches to the Extremities of the Toes.

Diaphragmatick NERVES [*Anat.*] these Nerves proceed from the *Cervicals*. After these Nerves have joined in a Trunk, they run through the *Mediastinum*, and arriving at the *Diaphragm*, they send out several Branches, some of them into the muscular, and others into the tendinous Part of it.

NERVES [*Architect.*] are the Mouldings of the projecting Arches of Vaults; or such as arise from the Branches of *Ogives*, and cross each other diagonally in *Gothick* Vaults, and serve to separate the nervous Spirit. See *Pendentives*.

OPUSCLE [*opusculum*, L.] a small Work.

OR [in Heraldry] signifies Gold, F. It is often represented by a yellow Colour, and in Engraving by small Pricks all over the Field or Bearing, as in the Figure. It is said to be compos'd of much

White and a little Red, as two Parts White and one Red, and of its self to betoken Wisdom, Riches and Elevation of Mind; with Red, to spend his Blood for the Wealth and Welfare of his Country; with Azure to be worthy of Matters of Trust and Treasure; with Sable, most rich and constant in every Thing, with an amorous Mind; with Vert, most joyful with the Riches of the World, and most glittering and splendid in Youth.

Others add, that Or signifies *Christian and Spiritual Virtues*, as Faith, Temperance, Charity, Meekness, Humility and Clemency; of *worldly Virtues and Qualities*, Nobility, Wealth, Generosity, Splendor, Chivalry, Love, Purity, Gravity, Constancy, Solidity, Prosperity, Joy and long Life. Of *precious Stones*, it represents the Carbuncle or the Topaz; of the *Planets*, the Sun; of the *Elements*, Fire; of *human Constitutions*, the Sanguine; of *Trees*, the Cypress or Laurel; of *Flowers*, the Heliotropium; of *Fowls*, the Cock and Bird of Paradise; of *Beasts*, the Lion; and of *Fishes*, the Dolphin.

O'RACH [*araches*, F.] a Pot Herb.

ORACLES [*oracula*, L. of *ora*, Mouths, or *orare*, to entreat] were ambiguous Answers made to the antient Heathens concerning Things to come. This, some are of Opinion, was done by diabolical Operation; and others, that it was by the Artifice of their Priests, who made the ignorant People believe that the God spoke by their Mouths. Of the former Opinion were several Fathers of the primitive Christian Church, and other great and learned Men, as *Tertullian* and *Vossius*, who held that the Devils, pretending to Fore-knowledge and Divination, gave dark and doubtful Answers, that if the Event fell out contrary to their Expectation, the People should think they had not comprehended the true Sense of the Oracle: Notable Instances of which are these that follow.

When *Cræsus* consulted the Oracle of *Apollo* at *Delphos*, he received for Answer this doubtful Riddle, in a form of Words so cunningly contrived, that the Truth was then farthest off when he thought to have gained it.

*Cræsus Halyn penetrans magnam
pervertit opum vim.*

When *Cræsus* over *Halis* roweth,
A mighty Nation he overthroweth.

Which he interpreting according to his own Desires, crossed the River, but was vanquish'd himself by *Cyrus*, King of *Persia*, and his own Nation and Country ruined.

King *Pyrrhus*, before he made War with the *Romans*, consulting this Oracle, received the following Answer,

Aio te Æacide Romanos vincere posse.

Which ambiguous Prediction he construing, *Te posse vincere Romanos*, Thou shalt overcome the *Romans*, gave them Battle; but found in the Event that the Devil meant, *Romanos posse vincere te*, That the *Romans* should overcome him, as they did.

Another Prince consulting this Oracle concerning the success of his Warring, receiv'd this Answer,

Ibis redibis nunquam per bella peribis.

Which he distinguish'd with *Commas* thus, *Ibis, redibis, nunquam per bella peribis*, Thou shalt go, thou shalt return, thou shalt never perish by War; undertook the War and was slain; upon which his Nobility canvassing the Oracle, perceiv'd that it should have been thus comma'd, *Ibis, redibis nunquam, per bella peribis*, i. e. Thou shalt go, thou shalt never return, thou shalt perish by War.

Of the latter Opinion, that the Predictions of the Oracles were not so much by diabolical Operation, as by the Artifices of the Priests, were *Eusebius*, *Aristotle* and *Cicero*, and many other famous Men, who were of Opinion, that Ora-

cles were only the cunning Tricks of the Priests, by which the Credulous were abus'd under the colour of Inspiration and Prediction.

Demosthenes seem'd apprehensive of this Cheat, when he said that *Pythia* always favour'd King *Philip* in her Answers.

The first Oracles we read of, were of *Jupiter Dodonæus* in *Epirus*, and *Jupiter Ammon* in *Africa*. Besides which there were several others. See *Amphiaraus*, *Dodona*, *Trophonius*, &c. in their proper Places.

Some have been of Opinion that Oracles ceas'd upon the coming of *Christ*; tho' this cannot indeed be said, yet it should seem that they began then to decline; and *Suidas* relates, that *Augustus*, in whose Time our Saviour was Born, consulting the Oracle about his Successor, receiv'd the following, not satisfying Answer,

ἦναι

Ἐβραῖος κληταί με θεοῖς μακάριστον ἀνέσταν,
Τόνδε δοῦναι προλεπέ, καὶ ἴδων αὐτοῖς ἰκασθεῖν
Λοιπὸν ἀπ' αὐτοῦ σιγᾶν ἐκ βωμῶν ἡμαρτέον.

An *Hebrew* Child, whom the blest Gods adore,

Hath bid me leave these Shrines and pack to Hell;

So that of Oracles I can no more.

In Silence leave our Altar and farewell.

Whereupon *Augustus* coming home, erected an Altar in the Capital, causing this Inscription to be engraven on it in capital Letters, *HÆC EST ARA PRIMOGENITI DEI*.

And *Juvenal*, who liv'd in *Domitian's* Time, says, *Delphis oracula cessant*.

But there are several antient Writers that make it appear, that they continued above 400 Years after; and the Ecclesiastical History tells us, that *Julian* the Apostate, consulting an Oracle, could receive no Answer, because the Body of *Babylus* the Martyr was entomb'd nigh the Altar; So that the Devils could not deceive the World so much as they had done, when *Christ*, the Truth itself, was manifest in the Flesh; tho' all Oracles did not cease at that Instant, nor were they wholly silenc'd but with the Destruction of Paganism about the Year 451, when the Pagans were, by the Edicts of *Valentinian III.* and *Martianus*, forbid, upon Pain of Death, the publick Practice of their idolatrous Worship, and their crafty Impostures: Tho' some Oracles ceased long before the Birth of our Saviour, as in particular the most famous Oracles of *Greece*; for the *Persians* having laid their Country waste, the Priests forsook the Temples, and so the Oracles became silent.

ORDERS [in *Archit.*] are Rules for the Proportion that is to be observed in the erecting of Pillars or Columns, and for the Form of certain Parts belonging to them. And thence Buildings are said to be of several Orders, when the Proportion between the thickness of the Columns and their height, and all things requisite thereto, are different.

The principal Orders are five, the *Dorick*, *Ionick*, *Corinthian*, *Tuscan* and *Composite*.

The *Dorick Order* has its Columns eight Diameters in height, and should not have any Ornament; neither in its Capital nor Base. The *Astragal* and *Lisel* below the Capital, which is half a Diameter in height, constituting Part of the Shank or Body of the Pillar.

The *Ionick Order*, at its first Invention, had its Columns only eight Models in height; but afterwards the Antients augmented the height of its Pillars in order to make it more beautiful, and also added to it a Base that was not used before; so that then, with its Capital and Base, it contained nine Diameters of its thickness taken below: The Pedestal of it is two Diameters, and about two thirds in height, and the Capital is chiefly compos'd of Volutas or Scrolls, and they are commonly channelled with 24 Flutes.

The *Corinthian Order* is the finest and richest Order of them all. The length of its Columns, with its Bases and Capitals, is usually about nine and a half or ten Diameters, and the Capitals are adorn'd with two Rows of Leaves and eight Volutas, which support the Abacus.

The *Tuscan Order* is the most simple and most destitute of Ornaments, so that it is seldom made use of except in Vaults, in some rustic Edifices, vast Piles of Building, as *Amphitheatras*, &c.

The *Composite Order* or *Roman Order*, is one, the Capitals of whose Pillars are composed of two Rows of Leaves, like those of the *Corinthian Order*, and of the Volutas or Scrolls of the *Ionick*. These Columns are commonly ten Diameters in height, and wholly like to the *Corinthian* in all its Dimensions and Numbers except the Capitals, which have no more but four Volutas which take up the whole Space, which is filled both by the Volutas and Stems or Stalks of the *Corinthian Order*.

To these Orders some add the *Attick* and *Gothick*.

The *Attick Order* is a small Order of Pilasters of the shortest Proportion, having a Cornice raised after the manner of an Architrave for its Entablature.

The *Gothick Order*, which is so widely different from the antient Proportions and Ornaments, that its Columns are either too massy, in form of vast Pillars, or as slender as Poles, having Capitals without any certain Dimensions, carved with the thorny Leaves of Thistles, Bear's-foot or Coleworts.

But these have not been received by Herald's in common. There are these Reasons assign'd why these Ordinaries are called honourables: as 1. Because they have been in Use ever since the Practice of Armoury, immediately after the Partitions. 2dly, Because that being plac'd all together on the Escutcheon (which represents the Body of a Man) they intirely cover it, and seem as it were to ward off the Strokes that come from the Hand of the Enemy. The *Chief*, represents the Helmet; the *Wreath*, the Chaplet or Crown that covers the Head; the *Pale*, the Lance or Spear; the *Bend* and *Bar*, the Belt; the *Fesse*, the Scarf; the *Cross* and *Saltier*, the Sword; the *Chevron*, the Boots and Spurs; and the *Bordure* and *Orl*, the Coat of Mail.

If a Person was wounded on the Head in Battle, the King or General afterwards gave him a *Chief*; if in the *Legs*, a *Chevron*; if his *Sword* and *Armour* were coloured with the Blood of the Enemy, a *Cross* or *Bordure*; and thus after a mysterious Manner erected for him an honourable Memorial of what he had done for his King and Country.

Hesiod tells us, *Orion* was the Son of *Neptune* by *Euryale* the Daughter of *Minos*; to whom this Gift was given, to be able to walk upon the Water as upon dry Land. He came to *Chius*, and having overcome *Merops*, the Daughter of *O-nepion*, with Wine, lay with her; *O-nepion* coming to the knowledge of this, and being enraged at it, put out his Eyes, and expelled him the Island. And he wandering to and fro, at last came to *Vulcan* and *Lemnos*, who taking pity of him, gave him one of his Family, by Name *Cedalion*, to be his Guide. *Orion* took this Man upon his Shoulders, that he might direct him in his Way. And taking his Journey towards the East, he arrived at the Sun, by whom he was cured as to his Blindness. And afterwards went back to *O-nepion* to be revenged on him; who was kept under Earth by his Guards. *Orion* therefore despairing to find him went to *Crete*, and delighting extremely in Hunting, fell into the Company of *Diana* and *Latona*, and (as it is reported) threatned he would not leave a wild Beast upon the Earth. Upon which the Earth, taking this in Indignation, sent a Scorpion of a prodigious size, by whom, being stung, he died. But *Jupiter*, at the entreaty of *Diana* and *Latona*, placed him among the Stars on account of his Prowess; and also the Scorpion in memory of the Fact.

PAN [*πᾶν*, Gr. All.] Hence Mythologists find Secrets of Nature couch'd, and that *πᾶν* signifies the Universe. An ancient *Egyptian* Deity call'd by them *Mandes*, a He-goat in the Shape of which he was there worshiped. But the *Greeks* say he was the Son of *Penelope* the Daughter of *Icarus*, whom *Mercury* ravish'd in the Shape of a He-goat, and born in *Arcadia*, whence he was esteem'd a rural Deity, and the God of Mountains, Woods, and Shepherds.

Plutarch, in a Tract of his *Morals*, call'd, *περὶ τῶν ἀσφαπτότων χρησμεύων* i. e. *Why Oracles cease to give Answers*, tells us a notable Story, that a Ship sailing out of *Greece* into *Italy* was becalmed about the *Echinades*, and the Persons in the Ship hear'd a Voice loudly calling on one *Thamus* an *Egyptian*, who was then in the Ship, who made no Answer to the first or second Call, but at the third reply'd, *here am I*; then the Voice spake again, bidding him when he came to the *Palodes* to make it known that the great God *Pan* was dead, and that, when they came to the *Palodes*, which are certain Shelves and Rocks in the *Ionian Sea*, *Thamus* standing on the Poop of the Ship did as the Voice directed him; whereupon was heard a mighty Noise of many together, who all seem'd to groan and lament, with terrible and hideous Shriekings. News hereof coming to *Tiberius* the Emperor of *Rome*, he caused the learned Men to enquire out of their Books who that *Pan* should be; who answered, that he was the Son of *Mercury* and *Penelope*. But those who more narrowly examined the Circumstances of this Accident, found it happen at the Time when our Saviour suffered on the Cross, who was the true God *Pan*, and Shepherd of our Souls; and

that upon this divulging his Death and Passion, the Devils who used to speak in Oracles, began to desist from that Office.

They feign him lascivious, and lustful, because of the many Causes of Seeds, and the Mixtures which are made from them.

He pursues the Nymphs, for he delights in Exhalations, which proceed from Humidity, without which it is impossible that the World should appear.

He is said to be clothed with a Leopard's Skin, as well because of the beautiful Variety of all Things, as also because of the Colours that are seen in the World.

They call him *Σύρτον*, either because he is blown through by all Winds, *ἀπὸ τῆς συρίττειν* i. e. of blowing, or that he is not accommodated to Dancing genteelly; but skips like Country-clowns that have not the Knowledge of more polite Musick, *ἀπὸ τῆς σκίρταν*, i. e. skipping.

PENTA'METER [πντὰμπετρον, Gr.] a Verse consisting of 5 Feet.

As I have before given you Tables for making *Hexameter Latin Verses*, so I shall here present you with one for *Pentameters*.

The Manner of Operation for *Pentameters*, is the very same with that of *Hexameters* (which see.) Only whereas *Hexameter Verses* consisting of 6 Words, do therefore require 6 Tables, *Pentameters*, deduceable from these Tables, are to consist but of 5 Latin Words, and so only require 5 Figures to work them thro' their 5 Tables: So that any Set of 5 Figures work'd thro' their respective Tables (in all Respects like as you have been shewn in the Example of the *Hexameters*) will produce 5 Latin Words, which will make a true *Pentameter Verse*, which will be true Latin and good Sense.

Thus the Figures 1 1 1 1 1 produce

Turpia significant arma maligna mihi

1 9 7 2 3 produce

Turpia procurant acta molesta mera

3 2 7 9 1 produce

Impia conglomerant acta maligna vides.

And if you are minded to compose a Pair of Verses together, viz. *Hexameter* and *Pentameter*, you must set down the 2 Sets of Figures, as thus; 6 8 5 1 9 1

8 9 1 5 5

of which Sets of Figures, wrought out by their proper Tables, will be produced the following Verses.

Pessima fata tuis prænarrant sidera nigra,

Tetrica significant astra nefanda viris.

Which Sets of Figures, if placed backwards, will produce quite different Verses.

By these Tables, between two and three hundred thousand *Hexameter Verses* may be produced.

The Versifying Tables for PENTAMETERS.

2. The *Peripateticks*, who explained the Nature of Things by Matter, Form and Privation; by elementary and occult Qualities; by Sympathies, Antipathies, Faculties, Attractions, &c. But these did not so much endeavour to find out the true Reasons and Causes of Things, as to give them proper Names and Terms, so that their Physicks is a Kind of *Metaphysicks*.

3. *Experimental Philosophers*, who by frequent and well made Trials and Experiments, as by Chymistry, &c. sought into the Natures and Causes of Things: And to these almost all our Discoveries and Improvements are due.

4. *Mechanical Philosophers*, who explicate all the *Phænomena* of Nature by Matter and Motion; by the Texture of their Bodies, and the Figure of their Parts; by Effluvia, and other subtile Particles, &c. and in short, would account for all Effects and *Phænomena* by the known and established Laws of Motion and Mechanicks; and these in Conjunction with experimental ones, are the only true *Philosophers*.

PHILO'SOPHY [Philosophia, L. φιλοσοφία of φιλέω, to Love, and σοφία, Wisdom, Gr.] the Knowledge or Study of Nature or Morality, founded on Reason or Experience.

PHILOSOPHY, the first that we find study'd Philosophy were the *Egyptians*, to which they gave so great an Air of Mystery, that the People did it Reverence as they did their Religion. For the Priests out of Design to surpass the Capacity of the Vulgar, and distinguish themselves from the Multitude, veiled their Observations under Figures and Hieroglyphicks. But as they had no Way of communicating but Tradition, and were not very ready to communicate it to Strangers, so we have little certain Knowledge what their Philosophy was; the *Grecian* Philosophers were the first that communicated, and left behind them to Posterity any such Pieces of Philosophy, as would give any clear Knowledge of their Principles and Inquiries. Those that apply'd themselves to the Study of the Motions of the Heavenly Bodies, in Order to distinguish their Periods and Revolutions, and to form the first Draught of an universal System, and to discern the Obliquity of the Ecliptick, and lay open the Secrets of natural Things, were *Thales*, *Anaximander*, *Anaxagoras*, *Heraclitus*, *Hippocrates*, *Democritus*, *Empedocles*, and *Archelaus*. The two great Founders of Philosophy were *Thales* in *Greece*, and *Pythagoras* in *Italy*.

Socrates and *Plato* were indebted to *Thales* for most of their fine Notions. *Thales* was the first who began to reduce the confused Ideas of his Predecessors into some Method and Order; and *Socrates* trac'd out the Plan of Logic and Morality, and supply'd Principles to Physicks. *Plato* was the Disciple of *Socrates*, and laid down the Plan of moral Philosophy: He first taught that true Philosophy consisted more in Fidelity and Constancy, in Justice and Sincerity, and the Love of our Duty, than on a great Knowledge and Capacity. *Aristotle* was Disciple to *Plato*, and was the first that collected the various Parts of Philosophy, in Order to cast them into a regular System, and was by that Means and his vast Discoveries, the most serviceable of all the Antients to Philosophy in the general.

After *Aristotle's* Time Philosophy degenerated, and the Purity of its first Originals were corrupted by the Multitudes of Sects of Philosophers that sprung up. For, as *Pere Rapin* says, *Zeno's* School was fill'd with false Virtues, *Epicurus's* with real Vices. Philosophy became impious under *Diagoras*, impudent under *Diogenes*, selfish under *Democritus*, railing under *Lycan*, voluptuous under *Metrodorus*, fantastical under *Crates*, drolling under *Menippus*, Libertine under *Pyrrho*, litigious under *Cleanthes*, turbulent under *Archelaus*, and inconstant under *Lachydes*. In short, Philosophy became abandoned to all the Extravagancies that can

can enter into the Mind of Man to imagine. The old *Platonick* School was by the new debas'd into the Tribe of *Scepticks* and *Pyrrhonians*, whose Profession was to doubt of every Thing; and after the Death of *Theophrastus*, the Order of *Peripateticks* cool'd very much in their Application to natural Things, preferring the Pursuit of Eloquence to them: Thus Philosophy declin'd in *Greece*. But after the Death of *Alexander*, the Kings of *Aegypt* and *Pergamus* became Encouragers of Learning; and after one of the *Ptolemys* had banish'd the Professors of Philosophy from *Alexandria*, they return'd to *Greece*; and the *Romans* beginning then to flourish, there was a short lucid Interval of Learning at *Athens*; where flourish'd *Panætius*, *Polybius*, *Carneades*, *Clitomachus*, *Apollonius*, and *Milo*.

Athens being at that Time the Academy for all the *Roman* Youth of Quality, from thence the *Romans* fetch'd their Philosophy. The first of the *Romans* that explain'd their Philosophy in Writing was *Lucretius*; also *Terentius Varro*, *Quintilian*, and *Cicero*. Toward the latter End of the Reign of *Augustus*, *Ptolemy* of *Alexandria* established a new Sect in *Rome*, choosing out the more rational Parts of all the other Systems, and re-uniting them with his own. During the Time of *Caligula*, *Nero*, and *Domitian*, the tyrannical Emperors of *Rome*, all Professors being banish'd from *Rome*, Philosophy declin'd instead of advancing. There was indeed *Seneca*, but he was more of a Courtier than a Philosopher; but *Plutarch* reviv'd the philosophical Spirit in the Times of *Adrian* and *Trajan*; and *Pliny* went farther than any Man before him.

So that not many Years after, the Emperor *Antoninus* so pursued philosophical Studies, as to obtain the Name of *Philosophus*. Then flourish'd *Epietetus*, *Arian*, *Galen*, *Diogenes*, *Laertius*, *Herodes Atticus*, *Pausanias*, *Aulus Gellius*, *Ptolemy* the Astrologer, *Maximus of Tyre*; and about the same Time *Taurus of Berytus*, *Athenæus*, *Alexander Aphrodisæus*, *Apuleius*, and *Porphyry*, who for a long Time kept Philosophy in Fashion. But *Lucian* finding it in a State of Corruption, compared to what it had been, fell foul of the Professors: But when the Light of the Gospel began to prevail, then the Christian Philosophy began to dart its Rays, and the Fathers of the Church set themselves about the Study of Philosophy, that they might be able to vanquish the Heathens by their own Weapons. Among these were *Justin Martyr*, *Clemens Alexandrinus*, *Tertullius*, and *Eusebius*. To these we may add *Pantæus*, *Celsus*, *Lactantius*, *Arnobius*, *Gregory Thaumaturgus*, and *Ammonius*, who was the first that taught the Philosophy of *Aristotle* in the Christian Schools. So *Basili* is reported to have been the ablest Logician in his Time: *Chrysostom* eminent as well for Philosophy as Eloquence; and *St. Austin*, who compos'd a System of Logic; and many more that might be annexed. When the *Barbarians* over-ran both the Eastern and Western Empires, all Learning and Philosophy shared in the same Fate with the Government; and the *Saracens*, who over-ran most of the Eastern, and good Part of the Western Empire, disseminated that little Learning they had among them on the conquered, and by (as *Pere Rapin* says) fixing too closely on the Text and Letter of *Aristotle*, got an abstracted Way of Reasoning, that was something different from the Solidity of the *Greeks* and *Romans*; which tho' it appeared to have in it great Sagacity, yet was false and full of wild Conceits, as will appear by the Works of those *Arabian* Philosophers, *Avicenna*, *Alkindus*, *Algazel*, *Averroes*, *Alpharabius*, *Albhasen*, &c. *Averroes* followed *Aristotle*, and *Avicenna*, *Plato*; *Ludovicus Vives* censures the Metaphysics of *Avicenna*, and the Philosophy, as the Dreams of a roving Imagination, and a-Kin to the *Alcoran*.

After the *Arabians* came the Schoolmen, who framing their Genius on *Arabian* Comments, thence the School Philosophy became so subtle and knotty. Of this Sect *Thomas Aquinas* is accounted the Founder. Had this School Philosophy died in those Countries where Superstition and Sophistry were buried, well had it been: But when true Religion and Learning reviv'd with the Reformation, School Divinity was industriously cultivated; which seems to have been calculated for the Continuance of the Darkness of Popery, because it rather perplexes than explains Things: And had it not been for the Subtilties of the Schools, the smallest Ray of Christian Light might have sufficed to have attracted the Eyes of sincere Christians.

The School-Men who come under the Name of Philosophers, were *Lanfranc*, whom *William* the Conqueror made Archbishop of *Canterbury*, *Abelard* and *Peter Lombard*, &c. who framed the rude Draught of this Sect from *Johannes Damascenus*. And this last mentioned is said to have been the first that established Transubstantiation in the Church of

Rome, in the Form it is now established. So this being probably accommodated to that and other Extravagancies in Popery, we may easily perceive what a fine new Philosophy it was: This Philosophy was perfected, and reduc'd to the Scholastick Way and into Form by *Thomas Aquinas*. And, like the *Platonick* Sect, it has been divided into three Periods, the old, the middle, and the new: The most considerable of the first Period was *Alexander of Hales*, an English Man; this lasted about 200 Years. *Albertus Magnus* began the second, and the *Aristotelian* Doctrine was carried to its Height by *Thomas Aquinas*, and *John Duns Scotus* an English Man. This lasted about an hundred Years. The third Scholastick Sect was begun by *Durandus*, and lasted about 100 Years.

Of these Scholastick Philosophers, *Pere Rapin* says, proceeded that dead Weight of Sums and Courses, that stifled all the Remains of good Letters in the World.

But while these Sums and Sentences were erecting by the School-Men, three other Philosophers start up; who forsaking the Scholastick Rules, set up a Method quite opposite, as *Lully*, *Cardan*, and *Paracelsus*; *Lully* having by his Commerce with the *Arabians* accomplish'd himself with a good Share of Knowledge in Philosophy, Astronomy, and Physick, out of them compos'd a fourth, that is Chymistry. *Cardan*, he brought the dark Cabalistical Learning upon the Stage; and *Paracelsus* was for framing a new Philosophy, a new Physick, and a new Religion, affecting to be mysterious, and even unintelligible.

In the thirteenth Century the Cabalistical occult Philosophy came into Vogue, being introduc'd or cultivated by *Cornelius Agrippa*, *Armand de Villeneu*, and *Petrus de Oppino*, who it is very probable were greater Cheats than they were Conjurers, as some have accounted them.

Mechanical PHILOSOPHY, was that which the most ancient of the *Phœnician* and *Greek* Philosophers have adhered to, in Order to the Explication of the *Phænomena* of Nature; they made use originally of no other Principles than the Consideration of empty Space, the Doctrine of Atoms, and the Gravitation of Bodies. These silently attributed the Causes of Gravity to something which was plainly distinct from Matter.

But our most modern natural Philosophers did not take in this Cause in their Inquiries into Nature.

They avoid aiming at any Hypothesis, in Order to explain the *Phænomena* of natural Effects, but leaving the Philosophy of Causes to Metaphysicks, they rightly considering that it is the chief End, Design, and Business of natural Philosophy to consider Effects, and by reasoning upon them and their various *Phænomena*, to proceed regularly at last to the Causes of Things, and especially to the Knowledge of the first Cause.

And it is certain that all true Progress and Proficiency in this Kind of Natural Philosophy, if it don't immediately lead us to the Knowledge of the first Cause, yet it will bring us still nearer and nearer to it.

Some turn about on their Axis, at several Times, and these Planets which may be imagined to be like our Earth, are opaque Bodies, and receive Light from the Sun, and reflect it; for there is none of the Planets, except the Sun that shines with his own Light, but he enlightens the Planets.

The Planets are lower than the fixed Stars. This appears in that they sometimes eclipse them and hide their Light from us.

There is a great Difference between the Planets as to their Lustre. The *Sun* appears of a gold Colour; the *Moon* of a silver Colour; *Venus* very white, brilliant, and luminous; *Jupiter* is not so white and luminous; *Saturn* appears of a pale lead Colour, and does not seem to shine; *Mars* is as red as Fire, and glances very much; *Mercury* is of a bright silver Colour, and glances but little, is not often seen in our Climate, because of the Obliquity of the Sphere, and he being near the Sun, for which Reason he is always obscur'd by or plung'd in its Rays, or the Vapours of the Horizon; but it is frequently seen in the torrid Zone, because in those Places the Sphere is not in so oblique a Position.

The Planets are distinguish'd into great and small.

The greater are in Number seven, *Saturn*, *Jupiter*, *Mars*, the *Sun*, *Venus*, *Mercury*, and the *Moon*; the smaller Planets are in Number nine, four of which are call'd *Jupiter's Satellites*, and turn about *Jupiter*, and the other five revolve about *Saturn*.

He remained in this Condition, till *Hercules*, by his Virtue and Valour, released him.

Some interpret this Fable thus, That *Prometheus* taught the Way of fetching Fire out of Stones, by striking them together, and thence is said to have fetched Fire from Heaven. And that he had his Abode on Mount *Caucasus*, from whence he continually beheld the Stars, and studied their Motions and Influences, and thence they gave it out, that he was bound to this Mountain. Others say, *Prometheus* was a wise Man, who studied the Stars, on the highest Part of Mount *Caucasus*, and that by his putting heavingly Fire into his Clay Man, is meant, his instructing the Dead, clayey Carcases of Mankind with Wisdom, and that the inward Trouble he had to accomplish his Desire, might be compared to a Vulture gnawing his Entrails.

PYRAMIDS [of Egypt] one of the seven Wonders of the World, are huge Piles of Building, within three Leagues of *Grand Cairo*. There are three principal ones, different in Dimensions; of which two are shut up, and the third is open. This is 520 Foot high, and 682 Foot square; it has 208 Stone Steps, each Stone about three Foot thick, and thirty Foot long. At one of the Angles is a little square Room, and at the Top a very fine Platform of 12 great square Stones, that are almost 17 Foot square, from which the strongest Man is not able to throw a Stone clear of the Pyramid. There are 16 Steps to the Door. The Entrance is square and even all along. This Walk leads to two more: At the End of one of them is a Hall, where is an empty Tomb of one Stone, like Porphyry, made, as some say, for that *Pharaoh* which pursued the *Israelites* into the *Red-Sea*. At the End of the other Walk, or Alley, there is a Hole made, as is probable, to let the Bodies down to the Caverns below. The two Pyramids which are lock'd, are much after the same Form. At some Steps of the open Pyramid, is an Idol, which *Pliny* calls *Sphinx*, but the *Arabs* call it *Abin el haboun*, being a Bust of one Stone, cut out of a natural Rock, representing the Face of a Woman, of a prodigious Bigness. It is 26 Foot high, and 15 from the Ear to the Chin. On the Top of the Head there is an Hole, through which a Man might pass, that reaches down to the Breast, and ending there. According to *Pliny*, the largest of these Pyramids was 20 Years in building, tho' 366000 Men were all that while employed about it.

The largest of these was built, some say, by *Cheops*, or as others, by *Chemnis*, as a Sepulchre; but he, being torn in Pieces in a Mutiny of the People, did not obtain the Honour of being interred in it. The second was said to be built by his Brother *Cephus*: The third by *Mycerius*; or, as others say, by the Strumpet *Rhodope*.

The Manner of the Performance seems to have consisted chiefly in the nimble turning of the Body, and shifting every Part, as if it was done to avoid the Stroke of the Enemy. *Julius Scaliger* tells of himself, that while he was a Youth, he often danced the *Pyrrhick* before the Emperor *Maximilian*, to the Amusement of all *Germany*. QUA'LITY [among *Logicians*] is the third of the Categories, of which, according to *Aristotle's* Division, there are four Sorts: The first of which comprehends *Habitude*: Which see. The second comprehends *natural Powers*: Which see. The third comprehends *sensible Qualities*: Which see. The fourth comprehends *Form and Figure*: Which see.

QUA'LITY [in *Physicks*] the Affection of a Thing whence it is denominated such; or that which causes a Thing to affect our Senses in this or that Manner, and gives it this or that Denomination.

The four first QUA'LITIES [in *Physicks*] are Heat, Cold, Moisture, Dryness.

The four second QUA'LITIES [with *Chymists*] Volatility, Fixity, Corrosiveness, and Corruptibility.

Occult

Occult QUA'LITIES [in *Physicks*] certain latent Powers arising from the specifick Forms of Things; a Name the Antients gave to those *Phænomena*, of which, according to their Principles, on rational Account could be given.

Sensible QUA'LITIES [in *Physicks*] are such as arise from certain Modifications of the Matter, and are the more immediate Objects of our Senses.

Primary sensible QUA'LITIES, are such as are found in all Bodies, or which agree to all Matter, considered as Matter, such are *Extension, Figure, Motion, Rest, Solidity, Impenetrability* and *Number*.

Secondary sensible QUALITIES, are such as result from a Composition or Mixture of the Elements; as *Light, Heat, Cold, Colour, Sound, Taste, Smell, Hardness, Softness, Fluidity, Firmness, Roughness, Smoothness, Transparency, and Opacousness*.

Spiritual QUA'LITIES, are the Qualities of the Soul, or those Affections of the Mind, as it is in this or that Habitude, or Disposition, as, *Knowledge, Opinion, Certainty, Doubting, &c.* all moral Virtues and Vices.

Corporeal QUA'LITIES, according to the *Peripateticks*, are Things distinct from the Bodies themselves; and are super-added to them, or flow from their substantial Forms. But the modern Philosophers explode the Notion of Qualities distinct from the Body, and say they are no other than the Affections of the Bodies themselves, as, *Figure, Magnitude, Motion, &c.* of the Parts whereof they consist.

QUA'LITY [in *Metaphysics*] is an Accident which influences its Subject after the Manner of an essential Form.

Active QUA'LITIES [with *Philosoph.*] such as by Virtue whereof Operations are actually produced on other Bodies, duly disposed in respect thereunto; as, the *Heat of Fire*, the *Moisture of Water*.

Passive QUA'LITIES [in *Physicks*] those whereby Bodies are disposed to receive the Action of others, as, *Inflammability in Oil, &c.*

Real QUA'LITIES [in *Physicks*] are those which remain in the Subject, and only act on Bodies adjacent to them; as *Fire in a Piece of Iron not ignited, &c.*

Intentional QUA'LITIES [in *Physicks*] are such as issue from the Subject, and operate at a Distance, as *Light from the Sun*.

Continual QUANTITY [in *Metaphysics*] is a Quantity whose Parts are joined together by a common Term. Quantity is an Accident, by which a material Substance is intended. The Species of *continued Quantity* are a *Line*, a *Superficies*, and a *Body*: For Quantity is extended, either into *Length* only, and then it is call'd a *Line*, tho' not a material one, but such as the Mind can frame by *Idea*; or else it is extended into *Length* and *Breadth*, and that is called a *Superficies*; or else into *Length, Breadth, and Depth*, and that makes a Mathematical Body, which is not to be understood as if it were a corporeal Substance.

Divided QUANTITY [in *Metaphysics*] is a Quantity, the Parts of which are not link'd together by a common Term, but are divided, as *Number*, that may be defined a Multitude of Units.

QUANTITY [among *Logicians*] the second Category, is either *Discrete* or *Continued*: *Discrete*, when the Parts are not bound together, as *Number*; *Continued*, when they are bound; and then it is either *successive*, as *Time* and *Motion*; or *permanent*, which is that which is otherwise call'd *Space* or *Extent*, in *Length, Breadth, and Depth*; the *Length* alone makes the *Line*, the *Length* and *Breadth* the *Surfaces*, and all three together the *Solids*.

Positive QUANTITIES [in *Algebra*] are those which are greater than nothing, and which have the Sign $+$ prefixed.

Negative QUANTITIES [in *Algebra*] are such as are less than nothing, and have this Sign $-$ prefixed.

Compound QUANTITIES [in *Algebra*] are such as are joined together by the Signs $+$ and $-$ and are expressed either by more Letters than one, or else by the same Letters unequally repeated, as $a+b-c$ and $bd-b$ are compound Quantities.

RAIN [pen, of *penian*, Sax.] a Vapour drawn by the Sun, and falling to the Earth in Drops.

Rain is formed of the Particles of Vapours, joining together, which, being joined, fall down to the Earth. The Difference between *Dew* and *Rain* seems chiefly to be this, That *Dew* falls at some particular Times, and in very small Drops, so as to be seen, when it is down, but is scarce perceivable while falling; whereas *Rain* is grosser, and falls at any Time.

There are several Causes, that may singly, or jointly, produce *Rain*.

1. The Coldness of the Air may make the Particles of the Clouds to lose their Motion, and become less able to resist the Gravity of the incumbent Air, and of consequence to yield to its Pressure, and fall to the Ground.

2. The Vapours may be gathered by the Wind in such Abundance, as first to form very thick Clouds, and then squeeze those Clouds together, till the watery Particles make Drops too big to hang any longer in the Air.

3. When the Vapours arise in so great Abundance, as to reach and mingle with the Clouds above them, then they cause *Rain* in very large Drops; and this may happen in still sultry Weather, because then the Clouds having no sensible Motion, and in the mean Time the Heat filling the Air with Vapours, they joining with the Clouds, and being stopp'd in their Progress, do open a Passage for the Stores of the Clouds to descend upon the Earth.

4. Sometimes the warm Wind thaws the frozen Clouds into Drops, as we see Snow dissolved by Heat. Now the thicker and sooner any such Cloud was gathered, the larger the Drops will be, because there was greater Store of Vapours condensed there. And hence it is, that in Summer Time, we have sudden Showers of Rain in exceeding great Drops. See *Snow* and *Hail*.

RAINBOW [Renboğa, Sax.]

Is the most admirable of all Meteors, of which the following *Phænomena* are worthy to be taken Notice of, and is a Bow of divers Colours represented in a dewy Cloud, consisting of innumerable Drops, each Drop being like a Globe of Glass filled with Water.

1. A *Rainbow* never appears but in a Place opposite to the Sun, so that when we look directly at it, the Sun is always behind us.

2. When a *Rainbow* appears, it always rains somewhere.

3. The constant Order of the Colours of the *Rainbow*, is, the outmost is red, or Saffron Colour; the next is yellow, the third is green, the fourth or inmost is violet or blue.

4. The *Rainbow* is always exactly round; but does not always appear equally intire, the upper or lower Parts being often wanting.

5. Its apparent Breadth is always the same.

6. Those that stand upon the plain low Ground, never see above half the Circle of the *Rainbow*, and frequently not so much.

7. The higher the Sun is above the Horizon, the less of the Circle is seen, and *vice versa*, if there be no Clouds to hinder.

8. No *Rainbow* appears, when the Sun is above 41 Degrees 46 Minutes high.

9. Sometimes two *Rainbows* appear together, of which one is higher and larger than the other, and shews the Colours afore said; but in an inverted Order, and much paler.

10. A *Rainbow* may be seen in the Night, at the Full-Moon, affording the same Appearance as from the Sun, but differing in Colour.

11. The *Rainbow* does not appear the same to all Persons; but every one sees his particular Bow, according to the Position he stands in.

Of all these sufficient Causes may be assigned, but must be omitted here, for want of Room.

SA'CRIFICE [*sacrificum* of *sacra*, holy Things, and *facio*, *L.* to perform] an Offering made to God on an Altar by a regular Minister, as the Payment of Homage, &c.

Writers say that the Devils being Enemies to God and his Glory, from the Malignity of their Natures, were not content with the Offerings of the Fruits of the Earth, and of all manner of Creatures that were usually sacrific'd to them, but were so barbarous as to require human Victims, viz. Men and Women, to be butcher'd and burnt alive upon their Altars.

The *Romans* did sometimes dedicate their young Infants to the Household-Gods, the Gods of the Family. The *Scythians*, that inhabited about that Part call'd *Taurica*, were wont to Sacrifice to their *Diana* all Strangers that came into their Hands. Many Damsels were beaten to Death with Bundles of Rods at an Altar of *Bacchus* in *Arcadia*. The *Germans* and *Cimbri* were wont cruelly to torment Men, and afterwards to sacrifice them. The Inhabitants of the most Northern Climates were wont to make a Feast for their Aged, and crown them with Garlands, and afterwards cast them down from an high Rock into the Sea; and others threw them off from Bridges into Rivers; whence they were called *Senes Depontani*. And *Cæsar*, in his Commentaries, relates, that the antient *Gauls* used to dress up a huge Statue made of Branches of *Ozier*, having filled it with living Persons, to burn it to their Idols. The *Egyptians* and Inhabitants of *Palestine* offered their own Children to their Gods, and the *Israelites* themselves so far imitated their Barbarities, as to cause their Children to pass between two Fires, till they were miserably scorched; and they also shut them up in a hollow Idol of Brass, call'd *Moloch*, made red-hot, and while these innocent Victims were in this Manner tormented,

mented, they sounded Trumpets, beat Drums, &c. to drown their Outcries. Thence the Place was named *Tophet*, i. e. a Drum. And *Abaz* and *Manasseh*, Kings of *Judea*, were so wretched as to cause their own Children to pass thro' the Fire to *Moloch*.

In Sacrifices to Idols, a Choice of Animals was made according to the Dispositions of their Gods: For *Mars* is supposed to have lov'd no Creatures but such as were furious and warlike, as the Bull, &c. and *Neptune*, the Bull and the Horse. The He-goat was dedicated to *Bacchus*, because it is propense to spoil Vineyards; *Ceres* and *Juno* had Cows offered in Honour of them; *Diana*, She-goats; and *Faunus*, Kids.

The Ceremonies observ'd in their Sacrifices were these; They were carefully to observe, if the Victim had any Blemish; if so, it was rejected, and another taken, and the Priest took a Lump of burnt Corn and Salt, and sometimes Meal mingled with Salt, and threw it on the Victim; and when they had kill'd the Beast, they laid it on the Fire, and those that offer'd it held their Hands upon it, and prayed with the Priest, and then poured Wine into the Fire: If it were a *Holocaust*, i. e. a whole Burnt-Offering, the whole was consumed in the Flames: But if not, Part of it was laid aside for the Priests and those that offered it.

Then they danced round the Altar, singing Hymns and Songs in Honour of the Deity to whom it was offered. These Hymns consisted of three Parts, or Stanza's; the first was sung in turning from East to West; the other in turning from West to East; and the third Part they sung standing before the Altar.

The Superior Gods had their Altars in eminent Places, and their Temples built on such high Ground, that they might, without any Impediment, receive the first Rays of the rising Sun. The Priest wore a Gown, either white or purple; and, before he approach'd the Altar, wash'd his Hands in pure Water, fancying that this Washing cleansed the Soul, and rendered it acceptable to the Gods. The Priest then, having his Head adorned with Garlands and Ribbons, led the Beast adorned in like Manner to the Altar, being follow'd by a Crowd of People adorn'd with Crowns made of such Trees as were supposed most acceptable to the God. The Victim stood by the Altar a small Time, while the Priest offered a set Form of Prayer to *Janus* and *Vesta*, and then with a Knife mark'd the Beast from Head to Tail; and if it was any Thing unruly, and willing to get away, they imagined it was not acceptable to the God, and therefore procured another. After the Performance of these and other such like Ceremonies, the Priest laid on the Head and Back of the Beast the *Mola Salsa*, i. e. Meal and Salt mingled with Frankincense, and after he and his Assistants had tasted of a Cup of Wine, he poured the rest between the Horns of the Beast, and pulling a few Hairs from the Place, threw them into the Fire; then the Beast was slain, either by knocking down or cutting his Throat, and dead; then the Soothsayer with a long Knife turned the Bowels up and down, for it was unlawful to touch them with his Hands, and having made his Observations, and given his Judgment of them, they were presented to the Deity on a Lance, or if to a Sea-God thrown into the Waves; then the Priest threw Frankincense into the Fire with Wine, and took a Part of every Member which his Ministers had cut out into a Platter, and cast them into the Flames; and while they were burning, he and the Offerers made Prayers to the God, holding their Hands upon the Altar, and afterwards retired with the Assistants to feast upon the remaining Part of the Beast, singing the Praises of the Deity. After they had eaten, they returned back to the Altar, and cast into the Flames the Morsels of Meat that they had left, with the Tongue and some Wine, with Thanks to the Deity for the Honour and Advantage of sharing with him in the Victim offered to him.

To the superior Gods they pray'd standing, but to the infernal, sitting.

The Gods of the Air were adored with Musical Instruments, and melodious Songs, more than the former.

The Sea-Gods were worshipped near the Sea, and the Blood of the Victim was poured into the salt Water.

The Sacrifices to the infernal Deities were performed in the Night. The Beasts were black, and offered in some Cave, or dark Place, except it were to *Pluto*.

The Nymphs and Divinities of the Field had Milk, and Honey, and Wine offered to them in their Sacrifices; the Male Deities had usually Male Beasts offered to them, and the Goddesses Females.

SA'TURN [*Saturnus*, L. or *Saturn*, of *satus* sown, because he is supposed to preside over Agriculture, according to *Varro*;] according to the Poets, was the Son of *Cælus* and *Terra*, which *Cælus* having cast his Sons the *Cyclops* into Hell, *Saturn* in Revenge, with his Scythe, cut off his Privities, and deprived him of the Power of begetting. What he had taken from him, he cast into the Sea, where, by a continual Agitation of the Waves, it found a favourable Womb among the Froth, and thence the Goddess *Venus* was produc'd.

Saturn had an elder Brother named *Titan*, to whom the Kingdom of the World did of Right belong; but he, by the Persuasions of his Mother *Vesta* and his Sister *Cybele*, resign'd the Scepter to *Saturn* for his Life, upon Condition that he should not suffer any of the Male-Children to live, that the Empire of the World might devolve to his Posterity after the Death of *Saturn*.

For this Reason, *Saturn* is said to have devoured his Male-Children; but his Wife *Cybele* saved *Jupiter* and *Juno*, by conveying them away, and *Neptune* and *Pluto*, who were privately nourish'd by their Mother, and sent him a Stone wrapp'd in Swaddling-Clouts instead of a Child, which he greedily devoured in the dark. But *Apollodorus* says, that he did swallow *Neptune* and *Pluto*; and that, when *Jupiter* was of Age, he married *Metis*, the Daughter of *Oceanus*, who gave a Drink to *Saturn* that made him vomit them up; whereupon *Titan*, seeing his Expectations frustrated, made War upon *Saturn* with the Assistance of his Sons, and having vanquish'd him, clapp'd him up into Prison, and there kept him, till his Son *Jupiter* became of Age, and deliver'd him thence. But *Saturn* having learn'd by some Oracle, that one of his Sons should take his Scepter and Kingdom from him, resolv'd to lay Snares to destroy his Son *Jupiter*; but he, taking Arms against his Father, cast him out of his Kingdom and Empire of Heaven; whereupon *Saturn* retired to *Italy* to hide himself, which was thence call'd *Latium a latendo*. (*Bochartus* applies this Story to *Nimrod's* Usurpation of the supreme Power.) *Janus*, the King of *Italy*, is said to have received *Saturn* with all Civility and Respect.

Saturn is said to have brought upon the Earth the *Golden Age*, when the Ground yielded all Sorts of Fruits, without Labour and Tillage, when *Astræa* or Justice manag'd the Affairs of Men, and they liv'd together in a perfect Love and Amity. The four Ages mention'd by the Poets were the *Golden* under *Saturn*, or *Noah*; the *Silver* under *Jupiter*, or the Posterity of *Noah*; the *Brazen* under *Nimrod*; and the *Iron*, which yet continues.

The learned *Bochartus* endeavours to prove that *Saturn* is *Noah*, and that all the Fables of him are Delineations of his true History; The three Sons of *Saturn*, that divided the Empire between them, are equal to the three Sons of *Noah*; the youngest *Ham*, he proves to be *Jupiter*, *Japhet*, to be *Neptune*, and *Shem* to be *Pluto*; and that their different Governments have a Relation to the Places they have inhabited. And that *Ham* going into *Egypt* and *Lybia*, being hot Places, is said to have possessed Heaven; and that *Japhet* going into *Europe*, and the *Islands*, they feigned him God of the Sea, or *Neptune*; and that *Shem* being remarkable for his Piety, his profane Brethren, by Way of Derision made him the God of Hell or *Pluto*.

Guatruchius says, that *Saturn*, or *Time*, is represented as an old Senior, with Wings upon his Shoulders, and a Scythe in his Hand, as cutting down all before him; and that he is represented as swallowing his own Children with hard Stones, because *Time* eats and consumes the most durable Substances.

The Antients painted *Saturn* with six Wings, to intimate the Swiftneſs of *Time*, and Feet of Wool, or, as others ſay, with the Gout, holding in his Hand a Serpent biting his Tail, with a Sickle and an old Garment hanging upon him.

The Romans deposited under his Protection and in his Temple their Treasure, becauſe in his Reign, *i. e.* in the Golden Age, there was no Theft or Robbery committed; and there they laid up the Rolls of the Names of the Roman People, which were made of the Skins of Elephants.

Theſe were Times of all Debauchery and Licentiousneſs, Servants taking upon them to command their Maſters, and Slaves to be unruly, without Fear of Punishment.

The Priests of *Saturn* were initiated in ſcarlet Robes, to expreſs their Bloody-mindedneſs, and offered to him young Infants in Sacrifice, for which Inhumanity they were all crucified under *Tiberius Cæſar*. And the *Carthaginians* likewise did every Year offer to him human Sacrifices, which was the Subject of an Embaſſy from *Rome*; for tho' the Romans did mightily honour and eſteem *Saturn*, yet they did not approve that Men ſhould be offered to him. But they ſhew'd him this particular Reſpect, that they cauſed Torches and Tapers to be burning continually upon his Altars.

As to the Original of their Names, Authors differ. *Iſidore* derives the Name *Saxon* from *Saxum*, L. a Stone, they being a hardy and warlike Nation. But the Name *Saxon*, according to the Northern Antiquities, is older even than the Latin Tongue itſelf. *Krantzus* derives it from *Aſchanex*, the Son of *Gomer*; but he does not ſupport it by ſufficient Authority. *Goſopius Becanus* fetches it from *Sacce*, a People about *Armenia*; but this ſeems to be without any Foundation. But it is moſt probable they were call'd Saxons, from the ſhort Swords they commonly wore, called *Saxen* or *Seaxen*; and *Tacitus* ſays, the Northern Germans were diſtinguiſhable by a round Shield, and a ſhort Sword, that they wore. The *Sibylla Cumana* was a Virgin who liv'd an innocent Life in a Cave, near *Cuma* in *Italy*, far from all Acquaintance and Society of Men. She composed nine Books of Things to come, and brought them to *Tarquinius Priscus* to be sold, demanding about 300 Pounds for them; which he refusing to give, she burnt three of them, and required the same Price for the rest; but, the King refusing to give it, she went away; and having burnt three more, and returning, demanded the same Money for the remaining three, for which the King, by the Advice of his Soothsayers, gave her the Money. SNOW [*snap*, *Sax.*] is a moist Vapour elevated near to the middle Region of the Air, whence it is thickened into a Cloud, and reduced into the Form of carded Wool, then falling down by little Parcels. The white Colour of Snow proceeds from the Conjunction of Humidity with Cold, which naturally engenders Whiteness. If Snow falls in Summer-time, it is caused by the high Mountains, which, cooling the lower Region, give Bodies unto Vapours, and cause them to descend as low as the Earth.

SNOW [according to the Learned Dr. *Grew*] as to the Form of it, has many Parts of it of a regular Figure, for the most Part being as so many little Rowels or Stars of 6 Points, being perfect and transparent Ice, as may be seen upon a Vessel of Water; upon which 6 Points are set other collateral Points, and these always at the same Angles, as are the main Points themselves.

From whence the true Notion and external Nature of Snow seems to appear, viz. That not only some few Parts of Snow, but originally the whole Body of it, or of a snowy Cloud, is an infinite Mass of Icicles, regularly figured, and not one Particle of it, originally being irregular.

It being a Cloud of Vapours gathered into Drops, which

Drops forthwith descend; upon which Descent, meeting with a soft freezing Wind, or at least passing through a colder Region of the Air, each Drop is immediately froze into an Icicle, shooting itself forth into several Points or *Striae* on each hand from its Center.

And as to any of them that are not regular in a Star-like Form, it happens thus; that still continuing their Descent, and meeting with some sprinkling and intermixing Gales of warmer Air, or, in their continual Motion and Waftage to and fro, touching upon each other; some are a little thawed, blunted, frosted, clumper'd, and others broken.

And these, though they seem to be soft, are really hard, because true Ice, the inseparable Property of which is to be hard, and seem only to be soft; because, upon the first Touch of the Finger, upon any of its sharp Edges or Points, they instantly thaw, or else they would pierce the Fingers as so many Lancets.

And tho' Snow be true Ice, and so a hard and dense Body, and yet is very light, is because of the extreme Thinness of each Icicle in comparison of its Breadth.

For so, tho' Gold is the most ponderous of all Bodies, yet, when it is beaten into Leaves, it rides upon the least Breath of Air; and so will all other Bodies where there is but little Matter and large Dimensions. As to the Whiteness of Snow, it is because it consists of Parts, all of them singly transparent; but being mixed together appear white, as the Parts of Froth, Glass, Ice, and other transparent Bodies.

As to its Reſidence in the Body, ſome hold that ſhe is in all the Body, and wholly in every Part of it. Others aſſign her Reſidence in the Brain; the Philoſophers and Divines in the Heart. *Aristotle* ſuppoſes a Male Body to receive its Soul the 42d Day after Conception, and a Female the 19th. Others ſuppoſe it to be infuſed with the *Semen* itſelf. *Des Chartes* is of Opinion it is infuſ'd when it is furniſhed with all its Organs, that is, after the Formation of the Belly, Heart, Brain, &c. which Anatomists ſay is about the 4th Month.

To **SOUND** a *Ship's Pump*, is to put down a small Line with a Bullet or some weighty Thing at the End, to try what Depth of Water there is in the Pump.

SOUND [*son, F. sonus, L.*] is a tremulous and waving Motion of the Air, which, being whirled into certain Circles, is most swiftly waved this Way and that Way.

SOUND [by *Naturalists*] is supposed to be produced by the subtiler and more ethereal Parts of the Air, being formed and modified into a great many smaller Masses or Contextures exactly similar in Figure; which Contextures are made by the Collision and peculiar Motion of the sonorous Body, and, flying off from it, are diffused all around in the Medium, and do affect the Organ of our Ear in one and the same Manner.

It appears also, that Sound is not produced in the Air, so much by the Swiftnefs, as by the frequent Repercussions and reciprocal Shakings of the sonorous Body.

Sir *Iaac Newton* demonstrates that Sounds are nothing else but the Propagation of the Pulse of the Air, because they arise from the tremulous Motion of Bodies. Which (says he) is confirmed by those great Tremors, that strong and grave Sounds excite in the Bodies that are round about, as the *Ringings of Bells, Noise of Cannon*, and the like.

He also found by Experiments, that a Sound moves 968 *English Feet* in a *Second of Time*, which *Second* is but the 60th Part of a Minute.

Mersennus computes that the Diameter of the Sphere of a Sound, heard against the Wind, is near a third Part less, than when it comes with the Wind. And yet there is one *Phænomenon* of Sounds, that is really wonderful, that all Sounds, great or small, with the Wind or against it, from the same Distance, come to the Ear at the same Time.

The following Properties of Sound have been observ'd, in which there is a near Relation to Light.

1. As *Light* acquaints the Eye with Figures, &c. so *Sound* informs the Ear.

2. As *Light* vanishes upon the Removal of a radiating Body, so *Sound* perishes as soon as the Undulation of the Air ceases.

3. As a greater *Light* eclipses a less, so a greater *Sound* drowns a less.

4. As too great and bright a *Light* is offensive to the Eye, so too great, loud, or shrill a *Sound* is offensive to the Ear.

5. *Sound* moves sensibly from Place to Place, as *Light* does, but nothing near so swift.

6. *Sound* is reflected from all hard Bodies, as *Light* is.

The Reverend Mr. *Derham*, by Observations and Experiments, concludes that Sounds may go above 700 Miles in an Hour.

SPEECH [of *ypace*, of *ypacan*, Sax.] the *Latin* Grammarians have distinguished Words into eight Kinds, and rank'd them into so many different Classes, as *Noun*, *Pronoun*, *Verb*, *Participle*, *Adverb*, *Conjunction*, *Preposition*, *Interjection*. This Division has been followed, in the general, by most modern Grammarians: But in this they differ from the *Greeks*, in that they make the Article one Part of Speech; and rank the Interjection with the Adverb. But the *Latins*, who did not commonly use the Article, made the Interjection a Part of Speech; so that they agree in the Number of the Parts, tho' not in the Division, which is *Article*, *Noun*, *Pronoun*, *Verb*, *Participle*, *Adverb*, *Preposition*, *Conjunction*. The Moderns, as the *French*, *Italians*, &c. who use the Article, very much follow the *Greek* Division: But the *English* generally follow the *Latin* Division, and make but little use of the Article, except *the* and *a*, the former of which is generally used before a Noun Substantive in the *Nominative* and *Accusative* Cases, and *a* which is a Note of a *Nominative*, only when it is by itself.

SPHERE [in *Astronomy*] the whole Frame of the World, as being, according to Appearance, of a spherical or round Figure.

Direct SPHERE [in *Astronomy*] is when both the Poles of the World are in the *Horizon*, and the Equinoctial passes thro' the *Zenith*; so that the Equator and all its Parallels, such as the Tropicks and Polar Circles, make Right-Angles with the *Horizon*, and are divided by it into 2 equal Parts; so that the Sun, Moon, and Stars ascend directly above, and descend directly below the *Horizon*; as at all Places situated just under the Equinoctial Line.

Oblique SPHERE [in *Astronomy*] is such a Situation of the World, as that the Axis of it inclines obliquely to the *Horizon*; one of the Poles being raised any Number of Degrees less than 90 above it; and the other depressed as much below it; so that the Sun and Stars ascend and descend obliquely, and some of them never ascend at all. This Position happens to all Places wide of the Equator.

A Parallel SPHERE, is that Position of the Globe which hath one of the Poles in the *Zenith*, and the other in the *Nadir*, the Equator in the *Horizon*, and all the Circles, parallel to the Equator, are parallel to the *Horizon*.

Fig. 1. represents a Right Sphere where the Axis of the Globe coincides with the *Horizon*; and the Equator *E Q*, and all its Parallels, are equally divided by the *Horizon*; consequently those, that enjoy that Position, have their Days always equal to their Nights.

In Fig. 2. which represents an oblique Sphere for the Latitude of 50 d. North, all the Parallels to the Equator are unequally divided by the *Horizon*; therefore, their Days and Nights are unequal, except when the Sun is in the Equator, because it is equally divided by the *Horizon*; therefore, then their Day and Night will be equal.

In Fig. 3. the Equator and *Horizon* are the same; and it is apparent from the Figure, that all the Time the Sun is in the six Northern Signs, he will still appear to describe Circles above, and parallel to the *Horizon* of the Inhabitants of the North Pole; hence it is called a *Parallel Sphere*; and all the other six Months he will continue under their *Ho-*

rizon.

In each of the preceding Figures, *N. P.* represents the North Pole, and *S. P.* the South, *aa* and *bb* the Polar Circles, *SS* the Tropick of *Cancer*, and *XX* the Tropick of *Capricorn*, *Ho* the *Horizon*, and *E Q* the Equator, and the Circle surrounding the Whole, a Meridian; the Line that is drawn from Pole to Pole represents the Axis of the Globe.

SPHINX [of *σφιγγω*, to perplex or puzzle, Gr.] was, according to the Poets, a Monster, the Daughter *Echidna* and *Typhon*, having the Face and Voice of a Girl, the Body like a Dog, the Tail of a Dragon, and Claws of a Lion, and large Wings on the Back. This infested the City of *Thebes*, proposing *Ænigmatical* Questions to those that passed by; and, if they could not presently solve them, it devoured them without Mercy: So that the Country round about was forsaken, and no Body dar'd to venture near the City. The Oracle, being consulted, declared, the only Way, to be delivered from its Tyranny, was to tell the Meaning of the Riddle; the Riddle was this; *What Creature is it that in the Morning walks on four Feet, at Noon on two, and in the Evening on three?* *Creon*, the King, having caused it to be proclaim'd all over *Greece*, that he would quit his Claim to the Crown, to him that should resolve the Question, it was done by *Oedipus*, as follows; that it was *Man*, who in his Youth went upon all Fours, as Beasts, upon his Hands and Feet; and, when arriv'd to his full Age, upright on his Feet only; and, in old Age, made use of a Staff instead of a third Foot. Upon the Resolving this Riddle, the Monster was so enraged, that in a furious Manner it dash'd its Brains out against a Rock. Some say, this *Sphinx* was a Robber, and that the Ambages of his Riddle were the Windings and Turnings of a rocky Mountain where he haunted, robbing and murdering those that travelled near *Thebes*.

SPHYNX [*Hieroglyphically*] was put to signify *Mysteries*, and accordingly was placed at the Entrance of all the Temples of *Egypt*, to intimate, that all the Gods there worshipped were mysteriously represented, and that the common People could never understand the Meaning of all the Images and their Postures without an Interpreter.

Cadmus having an *Amazonian* Wife, whose Name was *Sphinx*, went to *Athens*, and, having slain *Dracon*, seized on the Kingdom, and after that took *Harmonia Dracon's* Sister to Wife. Therefore when *Sphinx* came to know that he had gotten another Wife, having gain'd over many of the Citizens to her by fair Words, and gotten into her Hands a great deal of Riches, and a very swift Dog, that *Cadmus* used always to have with him, she betook herself to a Mountain, call'd *Sphingius*, from whence she attack'd *Cadmus* in a hostile Manner, made daily Ambushments, and destroy'd many of the Inhabitants of *Thebes*. Now they were wont to call Ambushments *σφιγματα*, i. e. Riddles, and this grew a common saying with them, the *Argiwan* (*Grecian*) *Sphinx*, propounding some Riddle, tears us in Pieces, and none can unfold the Riddle. *Cadmus*, he caused it to be proclaimed that he would give a great Reward to whomsoever should slay this *Sphinx*; upon this *Oedipus* of *Corinth* coming thither, who was famous for martial Achievements, and having with him a swift Horse, and some of *Cadmus's* Soldiers, ascending the Mountain by Night, slew *Sphinx*. And hence the Fable had its Original, *Palæphatus*.

SPIRIT of Mercury [in *Chymistry*] one of the five Principles which may be separated from a mixed Body by Fire. It is subtle, light, penetrating, and active, and hath its Particles in a very quick Motion; it is that which is supposed to cause the Growth and Increase of all Bodies of the Earth, on which it settles.

SPIRIT of Nitre [in *Chymistry*] is made by mingling one Part of Salt-Petre with three of Potters-Earth, and then distilling the Mixture in a large earthen Retort in a close reverberatory Fire.

SPIRITS, in an animal Body, are a pure and subtle Exhalation, bred and planted in it, being a thin Vapour engender'd of the Humour, and serving for a Siege to the natural Heat of the Body, and is therefore call'd *Natural*, *Vital*, and *Animal*; and in Man, &c. an Air which, exhaling by Sweat out of the Pores of the Body, refreshes the Spirits, and quickens the Members: It is drawn in by breathing, and distributed into three Portions, the greatest Part of which is carried to the Heart and Lungs for the Refreshment of the Spirits, and the forming, or to be the Matter of the Voice; the other is convey'd to the Stomach by the *Oesophagus*, and comforts the nourishing Odour by which the Body is sustained fasting; the remaining Part is attracted to the Brain, to which it conveys Odours, and temperates the animal Spirits.

Universal SPIRIT [in *Chymistry*] is the first of the Principles of that Art, that can be admitted for the Composition of mix'd Bodies; which being spread out through all the World produces different things, according to the several Matrices or Pores of the Earth in which it settles.

SPIRITS [in an animal Body] are accounted three, *viz.* the Animal Spirits seated in the Brain, the Vital in the Heart, and the Natural in the Liver.

The Animal SPIRITS, are an exceedingly thin, subtle, moveable fluid Juice or Humour, separated from the Blood in the *Cortex* of the Brain, and received hence into the minute Fibers of the *Medulla*, and are by them discharged into the Nerves, and are convey'd by them into every Part of the Body, and in them perform all the Actions of Sense and Motion.

Vital SPIRITS } [with *Naturalists*] are only the most

Fixed STARS, are so call'd, because they always keep the same Distance among themselves. and not because without Motion: For they have two Motions; one Motion is in common with the whole Heaven, which is from East to West on the Poles of the World, which carries all the Stars along with it, and this Revolution is made in twenty four Hours; the other Motion is from the West to the East on the Poles of the Ecliptick, which is very slow, for they do not make their Revolution, according to that famous Astronomer *Tycho Brahe*, in less than 25816 Years. These Stars are divided into several Constellations. It is the general Opinion, that the *Fixed Stars* are Bodies that shine by their own Light. The Region of Heaven, where the fixed Stars are plac'd, is that which is called the Firmament. STILE ? [*stilus*, or *stylus*, *L.* *σίλϠ*, *Gr.*]

STILE originally signified the Instrument or Iron Pen with which the Antients used to write, but it is now appropriated to the Manner of an Author's expressing himself.

Discourse is the Character of the Soul; Men's Words paint out their Humours, and every one follows that Stile to which his natural Disposition leads him; and thence proceeds the Difference in Stile among them that write in the same Language; and there is as much Difference in Stile as in Complexion.

A diffus'd STILE, is one that is so flowing, that how-muchsoever the Authors may have affected Brevity, yet one-

half of what they have said may very well be spared. Rhetoricians have reduc'd Stiles to three Kinds, the sublime, the middle, and the low.

A Sublime STILE [among *Rhetoricians*], is one that admits of nothing mean or low. If there be a thousand Things said well, if there be any Allay of a low Character among them, they will not gain the Character of the Sublime. The Expressions must every-where be noble, and answer the high Idea that we would give of the Subject. There are some bold Writers that are very fond of the Sublime, and to that Degree, that they mix something great and prodigious in every Thing they write, without examining, whether there be any Foundation for it in Reason.

The sublime Stile consists in Metaphors and Figures, which are used with the utmost Liberty. *Virgil's Aeneids* are in the Sublime; he talks of nothing but Battles, Sieges, Wars, Princes, and Heroes; every Thing is magnificent, and the Sentiments, Words, and Grandeur of the Expression answer to that of the Subject. There is nothing in the Poem that is common; if he is under a Necessity to make Use of any Thing that is ordinary, he does it by a particular Turn, by some Trope, as for Bread he puts *Ceres* the Goddess of Corn.

The middle STILE [among *Rhetoricians*]. There is no great Need of saying much in the Description of this Manner of Writing or Stile, because the very Name of it indicates, that it is the Mean between the sublime and the low or simple. *Virgil's Georgicks* are written in this middle Stile; as he is not in them talking of Battles, and the Establishment of the *Roman* Empire, he does not use the sublime; so, on the other hand, his Matter not being so humble as that of his *Bucolics*, he does not descend so low.

The Matter in these four Books being a Search after the hidden Causes of Nature, and a Discovery of the Mysteries of the *Roman* Religion, in which he mingles Philosophy, History, and Divinity together, he keeps the middle Way between the Majesty of his *Aeneids* and Lowness and Simplicity of his *Bucolics*.

The low or simple STILE [among *Rhetoricians*]. It is a Maxim that Words must agree with Things: The simple Stile is to speak as we commonly speak: *Virgil's Bucolics* are in the simple Stile, that is, a Stile that does not require Pomp and Ornaments of Eloquence, nor a magnificent Dress, but yet it rejects the vulgar Ways of Expression, and requires a Dress that is neat and decent. But, though this Stile is called simple, it does not mean, that it is vile and contemptible.

But in the same Kind of Stile some are softer, some stronger, some florid, and some severe.

A soft STILE, is when Things are said with so much Clearness, that the Mind is at no trouble to understand them: To effect this, every Thing that is difficult must be made easy, all Doubts prevented, and nothing must be left for the Reader to guess at. Every Thing ought to be said within the necessary Compass. The Sweetness of Cadence and Numbers does admirably contribute to the Softness of Stile, and, when it is tender and delicate, it is extraordinary. The Learned recommend *Herodotus* in the *Greek*, and *Titus Livius* in the *Latin*, as Patterns of this soft Stile.

The strong STILE is directly opposite to the soft Stile, it strikes the Mind, and renders it very attentive. In order to give a Stile this Strength, the Expressions must be concise, signifying a great deal, and raising several Ideas. Authors in *Greek* and *Latin* abound in strong Expressions; and none of the modern Languages have so great a Share as the *English*; the *French* cannot pretend to this concise and strong Manner of Expression.

A florid STILE depends in part on the soft Stile, and Tropes and Figures are the Marks of it. And *Quintus Curtius's* History is reckoned an Example of it.

The severe STILE is what allows not any Thing that is not absolutely necessary; it grants nothing to Pleasure, suffers no Ornaments, banishes all Warmth and Emotion, and, when it is carried too far, becomes dry.

A cold STILE [among *Rhetoricians*] is, when Orators make a bad Use of Figures; for, though they take never so much Pains to move the Auditory, they are heard with a certain Coldness and Indifference; as if a Man weeps without a Cause, Men laugh at his Tears; if he be angry without Occasion, his Anger is look'd upon to be either Folly or Madness: But, when both are well-grounded, the Persons present fall into the same Passions.

There may be also another distinction of STILES, in respect to Arts; the STILE of the Orator, the Historian, the Dogmatical, and Poetical.

The STILE of an Orator should be rich and abounding; for

for, that being design'd to enlighten obscure or doubtful Truths, it will be necessary that all the Clouds and Obscurities, which hide them, should be remov'd and dispers'd.

The Abounding of the Stile consists not in a Multitude of Epithets and synonymous Words and Expressions, but in such rich Expressions as will make the Reasons more valuable, and not dazzle the Eyes and Understanding. And though Tropes are serviceable on this Occasion, they ought never to dazzle with a false Lustre, or impose Falshood on the Auditory for Truth. The Orator should never be cold or indifferent in any Part of his Oration; a Person cannot argue well, if he is unconcern'd for the Success of his Argument: When the Heart does not agree with the Sentiments, the Discourse will languish. The Cadence and Number of this Stile ought from Time to Time to be periodical. The Roundness of Periods charms the Ear, and affects the Mind; and, when the Periods are pronounced majestically, they add Weight to the Matter.

2. *The Historical Stile.* History requires Eloquence as much as any other Subject whatsoever. The chief Qualifications are Perspicuity and Brevity, and Brevity contributes to the Perspicuity. It should be curt, free from long Phrases and Periods, which keep the Mind in Suspence. It ought not to be interrupted with extraordinary Figures, by those great Emotions which raise Passion, because the Historian ought not to shew any.

On some Occasions he may let his Eloquence shine, because he is sometimes under an Obligation to report what was said, as well as what was done; and, where Speeches are necessary, Figures will be also necessary to describe the Passions of those that speak them.

3. *The Dogmatick Stile* relates to the instructing in Mathematical, Physical, or Ethical, &c. Arts and Sciences. In this Stile there is no Occasion for Figures to move the Auditor; for it is suppos'd he comes with a Mind prepared to learn. No-body is much concern'd for the Truth or Falshood of a Geometrical Proposition; therefore the Stile ought to be simple, dry, and without any Motions, by which the Orator is inspired by Passion. In *Physicks* and *Ethicks*, the Stile ought not to be too dry, as in *Geometry* and *Algebra*; because the Matter is not so crabbed, tho' they ought not to go too far out of the severe Character.

4. *The Theological Stile* should be clear and solemn, harmonious and majestical.

TEMPLARS, or Knights Templars, said to have been instituted in the Year 1113, by *Hugh of Rayennes*, and confirm'd by Pope *Eugenius*. Their Habit was a white Cloak or upper Garment, with a red Cross on the Back, and a Sword girt about them; and thence they were by the common People call'd *Cross-Backs*, or *Crouched-Backs*. These Knights at first dwelt in Part of the Building that belong'd to the Temple in *Jerusalem*, not far from the Sepulchre of our Saviour, where they charitably entertain'd Strangers and Pilgrims, and in their Armour led them through the Holy Land to view such Things as were to be seen there, defending them from the Infidels. These Knights had in all Provinces of *Europe* their subordinate Governors, in which they possessed no less than 16000 Lordships, a vast Revenue. Their Governor in *England* was stiled Master of the Temple, and was summoned to Parliament; and the Temple in *Fleet-Street*, now the House of our Law-Students in *London*, being their House, the Minister of the Temple-Church still bears the Title of Master of the Temple. This Order continued for about the Space of two hundred Years; but at length being both rich and powerful, and also grown vicious, the whole Order was abolished by Pope *Clement V.* in the Year 1309, as also by the Council of *Vienna* in 1312, and their Possessions were given to the Knights of *St. John of Jerusalem*, whose Mansion was near *Smithfield*, now vulgarly call'd *St. Jones's*, and other religious Orders. The Crimes objected against them were, first, their Revolting from their professed Obedience to the Patriarch of *Jerusalem*, who was their Visitor. Secondly, their unspeakable Pride. Thirdly, their Sins against Nature.

In their Temples there were generally three Altars; the first at the Entry where the Victims were offered and burnt, the second in the Middle, and the third at the End, within an Enclosure: Upon the two last, only Perfumes and sweet Scents were burnt, and there the People eat in their Festivals to their Gods.

The *Pagans*, in the Month of *June*, used to lament his Death, and the Women used to carry a dead Body to the Ground, and lamented to perpetuate the Memory of his Death.

Some relate the Story of *Thammuz* in another Manner, and tell us that he was a Priest, who having been wrongfully put to Death by a King of *Babylon*, the King, being

tormented with Remorse of Conscience, laboured to make Satisfaction to him for the Injury, and caused many fabulous Stories to be related of him, that the People might be persuaded that he was admitted among the Gods, and commanded that every Year there should be an universal Mourning for him.

TRAGEDY [*tragedia*, L. *tragedie*, F. *τραγωδία*, Gr.] a lofty Sort of Play, in which great Persons are brought on the Stage; the Subject-Matter of it is always troublesome, and the Conclusion of it mournful.

Tragedy is in Imitation of one just, great, and probable Action, not told but represented; which, by moving Terror and Pity, conduces to purge the Passions in the Minds of Men. It is the principal Part of Dramatick Poetry, and the Fable or Design is the principal Part of Tragedy.

In *Tragedy*, it is not absolutely necessary that there should be Historical Truth; but there must always be a Verisimilitude, and, at the same Time, to make it wonderful is one of the most difficult Tasks in Poetry.

There are in it three Unities required, viz. of Action, Time, and Place; which Unities have been established by Critics, to bring the Drama as near Nature as possible.

1. *Unity of Action*. Two Actions, that are different and independent, will distract the Attention and Concernment of the Audience, and of consequence destroy the Poet's Design, which is to move Terror and Pity.

2. *Unity of Time*. Mr. Dryden ascertains the Unity of Time to be twenty-four Hours: That one Act must not take up half a Day, but the Time of every Act be equally divided. And *Aristotle* says, that the Time of Tragedy ought to be included in that which the Sun takes to perform his Career in, or very near it. But *Dacier* says, that *Aristotle* meant the Course of the Sun in a Day, from his Rising to his Setting, fourteen or fifteen Hours Time; and that he says is too long: And that the most perfect Pieces are those of *Sophocles*, which require no longer Time for the Action than the Representation takes up; which in *Sophocles*'s best Plays is not above four Hours.

3. *Unity of Place* [in the Drama]. Mr. Dryden says, requires that the Scene ought to be the same at the End, that it was at the Beginning of the Play, the same throughout. But this Unity is seldom observed in our taking Plays. If the Poets were confined to that, they would want Intrigue-Room.

TROPE [in *Rhetorick*] the Word is derived from *τρέπω*, to turn. A Trope signifies the Thing to which it is apply'd, only on account of the Connection and Relation it has to that whose proper Name it is; or it is, when a Word is carried from a Thing, which it signifies properly, to another that it signifies but indifferently. And tho' we may reckon as many Sorts of Tropes, as we can denote different Relations, yet *Rhetoricians* have established but a few, as *Metonymy*, *Synechdoche*, *Metanomasia*, a *Metaphor*, an *Allegory*, a *Litotes*, an *Hyperbole*, an *Irony*, and *Catachresis*.

Tropes, when aptly us'd, are a lively Picture of the Things treated of; as when a great General is call'd the *Thunder of the War*, the Image of Thunder is a sensible Representation of the Courage and Power with which this General conquers.

In using Tropes, great Care ought to be taken that there is always a Proportion between the natural Idea of the Trope, and that you would infuse into those that hear or read it, especially, that it does not beget one quite contrary to what you intended by it. The Riches of a Language are said to consist in Tropes; and as too much Riches oftentimes breed Disorders in Government, so too many Tropes will occasion much Disorders in a Discourse: They should not be used, but to express something that could not be expressed so well in the common Terms; and when we are obliged by Necessity to use them, they ought to be clear, and proportioned to the Idea of which we would give an Image.

As to the Necessity of using Tropes: If a Person would give an Idea of a Rock of an extraordinary Height, the Words *great* and *high*, being Words that are apply'd to Rocks of a common Size and Height, will not do; but if he says, a Rock that threatens the Skies, then the Idea of the Skies, that are above all Things else, and the Idea of Threatening (that agrees with a Man that is above others) will form an Idea of the extraordinary Height of the Rock, which could not well be expressed any other Way, but by this *Hyperbole*.

Besides, as those Tropes are quick Expressions, foreign to the Subject, which we are supply'd with by Use and Art, to be the Signs not only of the Emotions of our Thoughts, but of our Wits; so also the Passions have a particular Character, by which they paint out themselves in Discourse. See *Passion*.

Tho' the Barrenness of Languages frequently obliges us to make Use of Tropick Expressions, even when we are calm, and in Repose; yet the common Use of them (which generally makes Objects appear extraordinary) should only be where ordinary Terms will not represent them so lively as we would have them.

TROPHO'NIUS, a cunning Soothsayer, who made a great Cave in *Boætia*, whence he usually gave out his Oracles. After his Death, a Spirit was thought to enter into it, which supplied his Place in giving Oracles.

The Manner of consulting this Oracle is delivered to us by *Pausanias*, to the Purpose following: He, that goes into this Cave, must first make his Abode in the Chapel of *Good Genius*, and *Good Fortune*, employing himself in performing of some Ceremonies by Way of Atonement for former Offences, and is to bathe in the River of *Hercyne*. At his Going down he sacrifices to *Trophonius* and other Deities; and the Priest consults the Bowels of the Victim, and accordingly pronounces, whether the Deity will give an auspicious and satisfactory Answer. Then the Consulter is brought after Bathing by the Priest, to drink a Dose of the Water of the River call'd *Lethe* or *Oblivion*; and after that he takes the Water of *Mnemosyne* or *Remembrance*, that he may remember what shall be exhibited to him in his Descent. Among which is exposed a Statue adorn'd with admirable Carving, which is given out to have been the Workmanship of *Dædalus* himself. Then having done Obedience, and muttered over a Prayer or two, being clothed in a Linnen Habit, and set off with Ribbons, &c. he approaches the Oracle, which is situated within a Mountain near a Grove, the Foundation of which is built spherical-wise, of white Stone, about the Size and Circumference of a Threshing-Floor, but scarce two Cubits high, supporting brazen Obelisks, encompassed round with Ligaments of Brass, between which there are Doors that guide

guide the Passage into the Middle of the Floor, where there is a Sort of a Cave, not the Product of rude Nature, but built with the nicest Accuracy of Mechanism and Proportion; the Form of it is like an Oven, the Breadth about nine Cubits, the Depth eight, but there are no Stairs; but all that come bring with them a narrow light Ladder, by which they have descended to the Bottom. There is a Cave between the Roof and the Pavement, having a very narrow Entrance; at the Mouth of which the Person lies all along, and shoves himself Feet foremost into the Cave, and then he thrusts in his Knees; after a while the rest of his Body is roll'd along, by a Force not unlike that of a great rapid River, which over-powering a Man with its Vortex tumbles him over Head and Ears; and afterwards he returns the same Way back, with his Feet foremost. When the Consultant is return'd, the Priest places him on *Mnemosyne's* Throne, which is not far from the Shrine, and enquires of him what he had seen and heard, and relates it to others, he being yet stupified, and full of Amazement; and then he carries him to the Temple of *Good Genius*, and *Good Fortune*, and after some Time he is restored to his former Senses.

VE'NUS [so called, as some say *a veniendo*, coming, because she comes to every Thing. But *Varro* derives *Venus*, of *viendo*, i. e. binding, because she binds and unites Souls together. The *Greeks* call her *Ἀφροδίτη*, of *ἀφρός* Froth, as being produced out of the Foam of the Sea, as follows.] Some tell us that when *Saturn* had committed an Action full of Impiety, and with his graceless Scythe had cut off the Genitals of his Father *Cælus* (by that Means to deprive him of the Power of begetting) he threw them into the Sea; where, by the continual Agitation of the Waves, they found a favourable Womb among the Froth, and out of this bleeding Substance *Venus* was produced. Again, other of the Poets tells us that she was the Daughter of *Jupiter* and the Goddess *Dione*.

The Poets also make Mention of three *Venus's*: The first, the Daughter of *Cælus*; the second crept out of the Froth of the Sea (as before); and the third, the Daughter of *Jupiter* and *Dione*, who was married to *Vulcan*.

Venus was the Goddess of Love and Pleasure, on account of her extraordinary Beauty. Her Chariot was drawn by Swans and Doves, accounted lascivious Birds.

The Poets ascribe to her several Children, as *Hymenæus*, the God of Marriages, and the three *Charities* or *Graces* were her Daughters and Companions; also the two *Cupids*, the Gods of Love, the one of honest Love, and the other of unlawful and carnal Pleasures; and that infamous Deity *Priapus* was accounted her Son; and also *Æneas*; but she never had any Children by her Husband *Vulcan*.

Venus had several Temples built to her in the City of *Rome*. One to *Venus Erycina*, where was the Statue of *Amor Lætheus*, dipping his Arrows in a River; another to *Venus Libitina*, where the Urns and Coffins of the most considerable Persons of *Rome* were placed; another to *Venus Verticordia*, who was called *Venus Viriplaca*, where the Women appeared with their Husbands when there was any Difference between them, to find some Way of Reconciliation. The usual Sacrifices offered to her were Doves, Swans, Sparrows, &c. and to her was dedicated the Rose an Inducement to Love, and the Myrtle-Tree a Symbol of Peace.

Venus is often painted with a beautiful Countenance, Golden Hair, attired in a Robe of Black, Scarlet, or Dun Colour, with her Son *Cupid* by her; and sometimes Doves and Cypress-Trees, and sometimes in a Chariot drawn by Swans or Doves.

It is very probable that *Venus* was said to have been born of the Sea, for no other Reason than because the Cause, that effects all Things, requires Moisture and Motion. And

And the Sea has both these in a very large Degree.

They seem to be of this Opinion who say she was the Daughter of *Diana*: For Moisture is *Διερειν*, i. e. something splendid and vivid.

Αρεστη is that Power which produces Male and Female, as *αρεστη* signifies frothing, because the Seed of Animals is frothy.

Euripides fetches it from hence, that those that are captivated by *Venus* are *ἀρεσται*, i. e. foolish, mad, and doating.

Venus is feigned to be extremely beautiful, because she affords Men the Pleasure of Coition, which they find to surpass by far all Things else.

She is decorated with the Title of *φιλομειδης*, i. e. delighting in Laughter, because she is very prone to Laughter. The Cause of this Epithet is, Mirth and Laughter frequently accompany the venereal Act, and Persons are then very familiar.

The *Graces* are represented as sitting by *Venus*, and are her Companions and Attendants; also *Suadela* and *Mercury*. But why? Because those that are loved are pleased with amorous Orations and Favour (*Love*) or with the Pleasure that *Venus* affords in venereal Embraces.

She is called *Cythera* from *κύστις*, i. e. Impregnation, which follows Coition, or because for the most part it uses to slacken or lay venereal Desires.

She is signified by these three *ἐγενία*, i. e. heavenly, *πίνθημα*, i. e. vulgar or common, and *παναιρία*, i. e. the Cause of all Things; which intimate that her Power and Efficacy is conspicuous in Heaven, Earth, and Sea.

Among the Birds she delights in none so much as the Dove, because of its Chastity and amorous Courtship; for the Dove is amorous, and the Symbol of true Love, on account of its Manner of Kissing. She has an Antipathy to Swine, because of their Filthiness.

Among Plants the Myrtle is dedicated to *Venus*, because the Myrtle is accounted proper to engage or promote Love.

Also *Philyra* is sacred to her, because it promotes Venery; and they make Use of that chiefly in making Garlands, *Phuruttius*.

VENUS's Comb, Hair Looking-Glass, and Navel-wort, are several Sorts of Herbs.

VENUS [with *Astron.*] is one of the seven Planets, the brightest of all the Stars, except the Sun and Moon: It performs its periodical Motion in 224 Days, 17 Hours, and its Motion round its Axis is performed in 23 Hours. The Diameter of it is almost equal to the Diameter of the Earth.

VERTUE [virtus, L. virtu, F.] is defined to be a firm Purpose of doing those Things which Reason tells us is best; or, as others define it, a Habit of the Soul, by which a Man is inclined to do Good, and to shun Evil: Moral Honesty, good Principles. And as it is a common Saying in the Schools, all the Virtues are link'd together; so we may conclude, that all the (Cardinal) Virtues are helpful and assistant one to the other; for it is impossible for any one to be prudent, without being a Partaker of Fortitude, Temperance, and Justice.

The Antients [in Painting, &c.] represented Virtue by Hercules, only clothed with a Lion's Skin and his Club, performing some one of his twelve Labours; as offering to strike a Dragon, guarding an Apple-tree, &c. or holding in his Hand three golden Apples. His being naked denoted the Simplicity of Virtue; the Dragon did signify all manner of Vices; the Lion's Skin was an Emblem of Magnanimity; his oaken Club signified Reason; the Knottiness of his Club intimated the Difficulty and Labour in seeking after Virtue; and the three golden Apples were Emblems of the three Virtues Moderation, Content, and Labour.

The Cardinal VERTUES [with Moralists] are Prudence, Justice, Fortitude, and Temperance.

The Goddess *Vesta* was highly honoured by the *Romans*: They appointed to her particular Sacrifices and Temples, altho' the Poets do confound the Name of *Vesta* with that of *Cybele*. She was accounted the Goddess of Elemental Fire: Her Temple was round, and in it were two Lamps continually burning. Some say that there was, in the innermost Part of it, a Fire suspended in the Air in Pots of Earth, kept always alive by the *Vestal* Virgins; and, if it happened by any Misfortune to be extinct, some fearful Accident befel the *Roman* Empire, and therefore they punished the *Vestal* Virgins, by whose Negligence the Fire went out, in a very cruel Manner.

Vesta was also sometimes stiled *Mater*, and had her Statues standing in many Porches, as the Chief of the Household Goddesses. Her Temple was magnificent, and in it was deposited the *Palladium* or Image of *Pallas*, which *Aneas* is said to have brought with him from *Troy*; this was highly esteemed by the *Romans*, because the Oracle had pronounced, that the Safety of the Empire depended upon the Preservation of it. On the Top of *Vesta's* Temple was placed her Effigies sitting, having little *Jupiter* in her Arms: Her Priestesses were to keep their Virginity thirty Years, which was the Time appointed for their Attendance. They were had in such high Honour, that, if they casually met in the Streets an Offender, they could procure his Pardon; but, if they dishonoured the Service of their Goddesses by carnal Copulation with any Man, they were to die without Mercy, being condemned to be buried alive with Water and Bread.

VI'PER [*vipera*, L.] a poisonous Reptile of the Serpent Kind; an Adder.

Tho' this Serpent is one of the most dangerous Poisons in the animal Kingdom, yet the Flesh is of very great Use in Medicine.

The Body is of two Colours, ash-coloured or yellow, and the Ground speckled with longish brown Spots. It has Scales under its Belly which look like well polished Steel; the Male Vipers have two Sets of genital Instruments, and the Females two Matrixes, &c. they don't lay Eggs and hatch them, but are *viviparous*, bringing forth their young alive; which being wrapped up in thin Skins burst on the third Day, and they are set at Liberty. The Antients did believe that Vipers kill'd their Mother upon their Delivery; but this has been found to be a Mistake. The Number of Young brought forth in 10 Days Time, by the Female, is 2; but one on each Day. As for the Form of this Reptile, the Head is the largest and flattest of all the serpentine Race, the Snout resembling that of a Hog; they are usually half an Ell long and an Inch thick.

It never leaps like other Serpents, but creeps, and that slowly; but yet is nimble enough to bite, when provok'd.

It has 16 immoveable Teeth in each Jaw; but these are not those with which they give the deadly Bite, they being two other large sharp Teeth, hooked, hollow, and transparent, called *Canine Teeth*. These are situated in the upper Jaw, one on each side. These Teeth are flexible in their Articulations, and usually lie flat along the Jaw, the Viper never erecting them, but when it would bite.

These

These two Teeth are encompass'd at the Roots or Basis with a Vesicle or Bladder, which contains a yellow, insipid salivous Juice, about the Quantity of a large Drop. Its Body is not at all fetid, whereas the inward Parts of all other Serpents are intolerably noisome.

A VIPER [*Hieroglyphically*] was put to represent a wicked Angel; for as the Poison of Vipers is quick and powerful, so those destroying Spirits were thought to be quick and nimble in bringing about the Destruction of Mankind.

It was also used to represent the Danger of too much Love and Ingratitude; because it is related that the Female Viper destroys the Male at the Time of Copulation, and that the young Ones revenge the Death of their Sire, by gnawing out the Belly of their Dam, and so opening a Passage into the World.

VI'SION, is a Sensation in the Brain, which proceeds from a due and various Motion of the Optick Nerves, produced in the Bottom of the Eye, by the Rays of Light coming from any Object, by which Means the Soul perceives the enlighten'd Thing, together with its Quantity, Quality, Figure, &c.

VI'SION, an Apparition, Phantasm, or Ghost; also a divine Revelation in a Dream.

VISION [in *Opticks*] the physical Cause of Vision or Sight seems to be that the Rays of Light, striking on the Bottom of the Eye, do there excite certain Vibrations in the *Tunica Retina*; which Vibrations being propagated, as far as the Brain by the *solid Fibres of the Optick Nerves*, do there cause the Sense of Seeing.

For as dense Bodies do retain their Heat longest, and that in Proportion to their Density, they retain it longer as they are more dense; so the Vibrations of their Particles are of a more durable Nature than those of rarer Bodies, and can be propagated to greater Distances; wherefore the solid and dense Fibres of the Nerves, whose Matter is of an homogeneous and uniform Nature, are very proper to transmit to the Brain such Motions as are impress'd on the external Organs of our Senses.

For that Motion, which can preserve itself a good while in one and the same Part of any Body, can also be propagated a great Way from one Part of it to another; provided the Body be of an homogeneous Nature, and that the Motion be not reflected, refracted, interrupted, or disturbed by any Inequality in that Body.

Clear VISION [in *Opticks*] is caused by a great Quantity of Rays in the same Pencil, enlightening the correspondent Points of the Image strongly and vigorously.

VISION distinct, is caused when the Pencils of Rays, from each Point of an Object, do exactly determine in correspondent Points of the Image on the Coat of the Eye called *Retina*.

Faint VISION, is when a few Rays make up one Pencil; and tho' this may be distinct, yet it may be obscure and dark, at least not so bright and strong, as if a greater Number of Rays met together.

Reflected VISION, is when the Rays of Light are reflected and turned back again from any Body to the Eye.

Refracted VISION [in *Opticks*] is that performed by Means of Rays refracted or turned out of their Way, by passing through Mediums of different Densities, chiefly through Glasses and Lenses.

UVI'GERA }

VULCAN [so called of *volando* flying, and *candens* growing hot, or of *major vi ignis*, and *fulgere*, q. *Fulganus*, Varro] according to the Poets, was the God of Fire, was the Son of *Jupiter*, by his Wife *Juno*, but being very deformed, when *Jupiter* saw how ill-shapen and ugly he was, he kick'd him down from Heaven and by falling upon the Earth; the poor Babe broke one of his Legs, whereof he halted ever after. But *Thetis* and the Nymphs took Pity of him, and nurs'd him up: And when he came to be of Years he follow'd the Trade of a Blacksmith, and wrought for the rest of the Gods, especially for *Jupiter*, for whom he made Thunder-bolts. For that Purpose he had several Forges or Shops in the Isles of *Lemnos*, *Lipara*, and in Mount *Ætna*. He had Assistants or Journey-men that were called *Cyclops*, because they had but one great Eye in the Middle of their Forehead; the most noted of which were *Brontes*, *Steropes*, and *Pyræmon*. *Vulcan* had two Wives, *Aglaia* and *Venus*; but *Venus* had no Kindness for him, by reason of his Deformity, and therefore sought Satisfaction somewhere else, and readily accepted of the Embraces of *Mars*: But *Apollo* gave Notice of their Meeting to *Vulcan*, who found a Way to surprize *Mars* in the Embraces of his Wife, and spreading his Net all over the Place caught them together; and to put them to the greater Shame he sent for all the Gods to be Witnesses of their Dishonesty and his Dishonour.

To *Vulcan* is ascribed the Making the Chariot of the Sun and the Armour of the Gods and the Heroes. His Feasts were named *Protervia*, in which the *Romans* ran about with lighted Torches in Honour of him.

At the Foot of Mount *Ætna* there was a Temple erected, and a Grove planted in Honour of him, which was kept by a Dog, who (it is said) would tear the Vicious in Pieces (if they offered to approach) but would fawn upon such as were virtuous and good.

By *Vulcan* is understood to be meant natural Heat; and therefore the *Egyptians*, in their *Hieroglyphicks*, represented *Vulcan*, by an Egg proceeding out of the Mouth of *Jupiter*.

There were several *Vulgans*: The first was the Son of *Cælus*, the second of *Nihus*, named *Otas*, the third of *Jupiter* and *Juno*, and the fourth the Son of *Mænalus*, who dwelt near *Sicily*, in the Islands called *Vulcaniæ Insulæ*.

The Antients painted him in a scarlet Robe, having an Anvil standing by him.

A Description of the ORRERY.

ORRERY, The Name of a late invented Machine which represents the *Solar System*, according to *Copernicus*, in which the Sun in the Center has a Motion about his own Axis, and about him all the Primary and Secondary Planets perform their Annual and Diurnal Motions in their respective Orbits, by the Turning of the Handle at H.

The first of those Orrery's was made by the famous Mechanic, Mr. *Graham*, Watch-Maker in *Fleet-street*, *London*, who was encouraged by a Noble Lord, whose Title the Machine bears. There has been several of them made, of which some only had the Sun, Earth, and Moon, those only represented the Annual and Diurnal Motion of the Earth, the Change of the Seasons, and the Encrease and Decrease of the Days and Nights, with the Revolution of the Moon about the Earth, and her various Aspects, together with the Nature of the Eclipses of the Sun and Moon: Again, there were other Orreries made, which had the two inferior Planets, *viz.* *Mercury* and *Venus*, as also the Earth and Moon, which by Turning of the Handle, describe their Orbits in their respective periodical Times, and represent their various Aspects. But those which are the most compleat, have all the Planets both Primary and Secondary, as is represented in Fig. 1. In which S represents the Sun placed in the Center of this our *Solar System*, tho' in Nature, he is not exactly in the Center, for it is observed, that the Orbits of the Planets are Ellipses, and that the Sun is one of the Focuses of those Ellipses: But when such a vast Expansion as our *Solar System* is reduc'd to such a small Figure as the Orrery, then

then the Orbits may be made Circles without any considerable Error.

Next to the Sun is the Orbit of *Mercury*, and next to that the Orbit of *Venus*; the first is represented by the Ball at m, in Fig. 1, and the last by that at v, which in the Machine are represented by two Silver Balls on two Wiers.

Next to the Orbit of *Venus*, is the Orbit of our Earth, which in the Orrery, is represented by a Silver Plate, on which the Signs of the Zodiac, the Degrees of the Ecliptic, and the Days of each Month are drawn, and in Fig. 1. is represented by the Circle o o o o, and the Earth is represented by an Ivory Ball placed upon an Axis in Fig. 1. at t, so as to make an Angle with the Plane of the Horizon of $66\frac{1}{2}$ Degrees, that is, it declines from being Vertical $23\frac{1}{2}$ Degrees equal to the Angle made by the Intersection of the Ecliptic and Equator. About the Ivory Ball there is a Silver Circle, which is placed so as to incline to the Earth's Orbit in an Angle of 8 Degrees, which represents the Orbit of the Moon; and in Fig. 1. is represented by the Circle l l l, and the Moon is represented by a Silver Ball as at l over one half of the Moon; there is a Cape, which as the Moon goes round the Earth by the Turning of the Handle at H, the Cape serves to represent the Moon's Phases as they appear, when observed by the Inhabitants of this Earth. Before we proceed to describe the rest of the Orbits of the Planets, it will be necessary to consider some of the Phenomena, which the Orrery represents of those Bodies already named; and in order thereto, it is to be observed, that by the Turning the Winch or Handle at H, the Planets are all put in Motion, and that one Turn of that Handle is equal to one Diurnal Revolution of the Earth upon its Axis, and by which the Succession of Day and Night is most beautifully represented; as also, the Variety that exists on our Earth of the Sun, continuing always rising to some Meridians, setting to others, and that there is a continued Series of Mid-day and Mid-night to the several Inhabitants of this Earth; for the Earth turning about on its Axis from *West* to *East*, makes the Sun appear to pass from *East* to *West* in the same time; and as the Sun, by being on the Meridian of any Place, makes Mid-day on that Meridian, and the general Horizon, which separates the inlightened from the darkened Hemisphere, reaches 90 Degrees round that Point where the Sun is Vertical; therefore, as the Earth turns round from *West* to *East*, the Sun will proceed from the *Eastern* to the *Western* Meridians, and so make a continual Succession of Mid-day over all the Globe, as may plainly be seen by turning the Handle H, and that all the 24 Hours of our Day, exists always to different Meridians on the Globe; Again, while the Earth revolves once round its own Axis which is called its Diurnal Motion, it in that time is carried forward about one Degree in its Orbit round the Sun, which is called its Annual Motion, and when the Sun is in *Aries*, it is evident that the Sun will appear in the opposite Point of the Ecliptic, and the Earth's general Horizon, which separates the inlightened from the darkened Hemisphere, coincides with both Poles, and divides the Equator and all its Parallels equally as is represented in Fig. 2. where the Lamp represents the Sun in the Orrery, which by the Means of a Convex Glass, casts a strong Light upon the Terrella, (the Room being darkened) and when the Earth is in *Aries* or *Libra*, the Rays of the Lamp will enlighten one half of the Equator, and of each of its Parallels, and the Horizon, which separates the inlightened from the darkened Hemisphere, passes thro' both the Poles as it is represented at P, Fig. 2. and as the Equator and all its Parallels are equally divided by the general Horizon, therefore the Day will be equal to the Night over the whole Globe, when the Earth is in one of those two Points of *Aries* and *Libra*, as will evidently appear, by turning the Handle once round, and as the Earth moves thro' *Libra*, *Scorpio*, and *Sagittarius*, the inlightened Arch of the *Northern* Parallels of Latitude encreaseth, while the inlightened Arch of the *Southern* Parallels decrease, by which is represented the Increase of the Day in the *Northern* Latitudes above the Length of the Night, and the Decrease of the Length of the Day in the *Southern* Latitudes; and the Earth being in the first Degree of *Capricorn*, the general Horizon reacheth $23\frac{1}{2}$ Degrees on the other Side of the *North* Pole, and consequently the whole *North* Frigid Zone has then one continued Day, while the *South* Frigid Zone has one continued Night, as is represented, Fig. 2. at Q, and as the Earth is carry'd thro' *Capricorn*, *Aquarius*, and *Pisces*, the Rays of the Lamp shews the Decrease of the Days in the *Northern*, and Increase in the *Southern* Latitudes till the Earth be in *Aries*, where the Days and Nights are again equal, and here it is to be observed, that the Earth from the first of *Aries* to *Libra*, turns 178 times round its own Axis, and all that time the *North* Pole was within the Rays of the Lamp

without any Night, while the *South* Pole had all Night without any Rays of the Lamp to represent Day, and while the Earth moves thro' the six *Northern* Signs, the same Phenomena will happen to those in the *South* Side of the Equator, as did to those Inhabitants on the *North* Side thereof, when the Earth was in the *Southern* Signs. The Lamp is contrived to be carried about with the Annual Plate, by which it represents the Course of Nature so as to emit Rays of Light, and to inlighten that Side of Terrella which is turned towards it, while the opposite Side of the Terrella is in darkness. While the Earth is carry'd round the Sun by $365\frac{1}{4}$ Turns of the Handle, *Mercury* is carry'd round the Sun in 88 Turns of the Handle, and *Venus* in 244 Turns, which represents, that the Length of the Year in *Mercury* is equal to 88 of our Days, and the Length of the Year in *Venus* to 224 of our Days; as the Planets are divided into Primary and Secondary, so likewise they are divided into Inferior and Superior: The Primary Planets are those that revolve about the Sun as the Center of their Motions, and the Secondary those that revolve about, or attend some of the Primary Planets.

The Inferior Planets are *Mercury* and *Venus*, whose Periodical Times we have already compared with that of our Earth; the Superior Planets are *Mars*, *Jupiter*, and *Saturn*, whose Periodical Times, compared with that of our Earth, stands thus: *Mars* next, without our Earth perform his Revolution about the Sun in 687 Turns of the Handle, and is represented in Fig. 1. at M.

Jupiter in 4332 Turns of the Handle at H performs his Revolution which agrees to 4332 Revolutions of our Earth about its own Axis; and last of all, *Saturn* in 10759 Turns of the Handle compleats his Revolution, which is the Length of the *Saturnian* Year, and when compared with that of ours, is about 30 of our Years; *Jupiter* is represented in Fig. 1. at I, and *Saturn* at K. These Primary Planets, by the Turning of the Handle at H, describe their Orbit in the Times above-mentioned, which in some Degree, shews the Beauty of the Contrivance, and the Exactness of the Numbers by which the Wheels and Pinions are made to represent Nature in some of the most surprizing Phenomena, that the Mind of Man has hitherto been capable to account for, and to reduce to Calculation; but when we consider that the same Machine likewise has the Motions of the Secondary Planets as they move about their Primaries; as also how those Bodies eclipse one another, and the Time and Place that the Inhabitants of those Globes will be depriv'd either of the Light emitted from the Lucid Body, or of the reflected Light from the Opake Bodies; when these with a vast many other Phenomena are considered, which the Orrery represents exact as the Infinite Contriver of the Universe has made them to appear in Nature, it must then be esteemed as the most beautiful Production of the Mechanical Arts.

Fig. 3. Represents that Part separate, which contains the Orbit of the Earth and Moon. The Figure is raised from a Geometrical Plane without any Diminution of the Parts by Perspective, that the Nature of it may the better appear: This Figure serves to explain the Nature of Eclipses, for by the Construction of the Machine, the Sun at S, and the Earth at T, and T, have their Centers exactly at the same Height above the Place they stand on, while the Moon's Orbit O P Q R is inclined to that Plane; therefore the Parts of the Moon's Orbit will be in some Places higher above the Plane than the Earth's Center, and in some Places lower as in the Figures being highest at O, and lowest at P. Now the Moon's Orbit being carried along with the Earth round the Sun, changes its Position perpetually; so that the lowest and highest Points of it, O and P, are sometimes in a Line passing to the Sun, and sometimes in a quite contrary Position, as is represented in Fig. 3. thence it comes to pass, that we have sometimes Eclipses, and sometimes not.

The Orrery is sometimes inclosed in an Armillary Sphere, by which Means the Situation of the Solar System in respect of any Latitude, may be represented, as is shewn in this Sketch, mark'd Fig. 4. Mr. Glynn, Mathematical Instrument-Maker in London, was the First that apply'd the Orrery to the Armillary Sphere, with several other Improvements which would be too tedious to mention in this Place; therefore shall refer the Reader to a Book which is now in the Press, and that I shall very soon publish, which contains a full Description of the Orrery, with a great Variety of those beautiful Problems which may be perform'd by it.

The most curious of these Orreries placed in an Armillary Sphere, is in the Library of that truly Noble Lord, the Earl of PEMBROKE, who is famous for Learning, and the greatest Patron of Sciences which the present Age has produced.

1. The *Wall of Babylon*, and the pleasant Pensil Gardens planted on it, by *Semiramis*, built of a fat Clay, only found near the River *Euphrates*, and were very large and high. *Pliny* speaks of 200 Feet in Height, and some 250; but the common Opinion is, that they were 50 Cubits high, and so broad, that two or three Chariots might go upon them in a breast without Danger, the Compass of them about, is said to be about twenty two *English* Miles; 300000 Men are said to have been employ'd, in making this Wall, many Years; but some say it was made in one Year.

2. The *Labyrinth of Egypt*. See in Letter L.

3. The *Pyramids of Egypt*. See *Pyramids*.

4. The *Mausoleum of Caria*, which Queen *Artimisia* built as a Sepulchre for her deceased Husband, tho' he was not deposited there; for the Queen had so endeared Affection for him, that she caused the Ashes of his consumed Body to be put into a Cup of Wine, and drank them to give him a Lodging in her Heart. See *Mausoleum* in Letter L.

5. The *Colossus of Rhodes*. See *Colossus*.

6. *Jupiter Olympius*, is said to have been the neatest of all these Works, made by *Phidias*, of 150 Cubits high. The Head was of pure Gold, but the Body was of Brass. It was erected by the *Eleans*, a People of *Greece*, and placed in a Temple dedicated to *Jupiter*, which was enriched afterwards with many curious Representations; and excellent Statues. This Statue of *Jupiter* was sitting in a Chair half naked; but from the Girdle downwards he was covered; in the right Hand he held an Eagle, and in the Left a Scepter. The upper Part being uncover'd, intimated how he was known to the Angels; but the lower Parts being covered, signified how God hides himself in his Works from the inferior Creatures.

The Emperor *Caligula* endeavoured to transport this Statue to *Rome*; but those that were employ'd about it, were frightened from their Enterprize by some unexpected Accident.

7. The Temple of *Diana* at *Ephesus*, an incomparable work, supported by 120 large Pillars, every one the sole enterprize and work of a King, who was resolved to make his Piety and Magnificence appear upon his Pillar. See *Diana*.

WONDERS of the Peak [in *Derbyshire*.]

The first of these Wonders is *Chatsworth-House*, &c. the noble Seat of the Duke of *Devonshire*, where, besides the Stateliness of the Edifice, and Curiosities within it, too many here to be described, there are pleasant Gardens adorned with exquisite Water-works. 1. *Neptune* with his Sea Nymphs, which seem to sport themselves in the Waters, which appear to fall upon Sea-weeds. 2. A Pond where Sea Horses continually do roll. 3. A Tree, exactly resembling a Willow, made of Copper, of which (by turning a Cock) every Leaf continually distils Drops of Water, and so lively represents a Shower of Rain. 4. A Grove of Cypress and a Cascade, at the Top of which stand two Sea Nymphs, with each a Jar under her Arm, from whence the water falling upon the Cascade, produces a loud rumbling Noise, like the *Egyptian* or *Indian* Cataracts. 5. At the bottom

Bottom of this Cascade is another Pond, in which is an artificial Rose, thro' which the water ascends and hangs suspended in the Air, in the Figure of that Flower. 6. There is another Pond, where there is *Mercury* pointing at the Gods, and throwing up water. 7. There are several fine Statues of Gladiators, and other Curiosities.

The 2d is the Mountain call'd *Mam-Tor*, which is almost continually shivering down Earth and great Stones, in such Plenty, and with so great a Noise, as often to frighten the neighbouring Inhabitants, and to be heard at some Miles distance, yet never visibly grows less, tho' it hath thus continued for several Generations.

The 3d is *Elden-Hole*, a wide and terrible Chasm, about fourteen Yards in Length, and seven in Breadth. The Mouth of it craggy, but the inward Recesses contracted and intricate. It is accounted Bottomless, because it could never yet be fathom'd by any Art of Man, tho' divers attempts have been made, tho' it has been plumbed to the Depth of 884 Yards, 80 of which sunk into the water; and the Earl of *Leicester* hired a Man to go down in a Basket of Stones, who was let down 300 Ells, and being pulled up, was both Speechless and Senseless, and died within eight Days of a Phrensy. It is usual for those that go to see it, to throw down Stones, and lay their Ear to the Mouth of the Pit, which make a great Rattling and Noise for a long Time, which is lessened by Degrees, till it gets beyond the Sphere of hearing.

The 4th is *Buxton-Wells*, in Number nine, the water of which is hot, sulphurous and saline, yet not fetid, but very palatable. They spring out of a Basalike Marble, and it is pleasant to see the sulphurous Halitus break out in Bubbles, and impregnate the water. These waters are very salutiferous.

The 5th is *Weeding-Wall* or *Tides-Well*, a Spring that Ebbs and Flows like the Sea, sometimes two or three times in an Hour; and upon the sinking of the water makes a gurgling Noise, like the pouring of Liquors out of Bottles, but much louder. The Diameter of the Spring is about a Yard, and the Depth much the same, and the water rises and falls about three Quarters of a Yard.

The 6th is a remarkable Cave, the Entrance of which is at the Foot of a large Mountain, call'd *Coitmoß*, by a small Arch, so low, for several Paces, that those who go into it are forced to creep upon all fours for a while; but then it opens to a considerable Height, not unlike to the Roof of a large Cathedral. On the right Hand is an hollow Cavern call'd *Pool's Chamber*, where by striking a Stone upon the Wall, a noisy Echo rebounds. Hence your Guide conducts you, with a Candle, over Ridges and Rocks of Stone, and shews you many Representations of Art and Nature, produced by the petrifying water continually dropping from the Roof and Sides of the Rock. There are the Representations of the most curious Fret-work, Organ and Choir-work, and in other Places the Figures of Animals, as the Body of a Man, a Lion, a Dog, and many other Beasts, which a pregnant Fancy readily suggests, as also a Chair, Flitches of Bacon, a Lanthorn, and many other Varieties. A little farther is a Pillar, called *the Queen of Scots Pillar*, clear and bright as Alabaster; and beyond that a steep Ascent of near a Quarter of a Mile high, which terminates near the Roof in a hollow call'd *the Needles Eye*, in which when the Guide places his Candle, it represents a Star in the Firmament. A Pistol being fired off, near the Queen of Scots Pillar, gives a Report near as loud as a Cannon. You return back a different way, passing several Currents of water. Some say this Cave takes its Name of one *Pool*, a notorious Robber and Outlaw, who fled from Justice; others, that he was some Hermit, who there lived a retired Life. A little Distance from *Pool's Hole*, is a small clear Brook, memorable for its Composition of hot and cold water, so united in the same Stream, that you may at once put the Finger and Thumb of the same Hand, the one into the hot, and the other into the cold.

The 7th is the *Devil's Arse* or *Peak's Arse*, a wide subterraneous Cavern running under the Hill near *Castleton*, the Entrance of which is large, but the farther you go, the narrower it grows: The Top of it is very high, and appears to the Eye to be a most graceful Arch, chequer'd with diversity of coloured Stones, from which continually drops a sparry water that petrifies. Within this Arch are several small Buildings, which are inhabited by poor People, who lie there ready to attend Travellers who have the Curiosity to come to see these Rarities. This Cave, after you are gotten a little way in it, is very dark and slippery, by reason of a Current of water that runs along it, and you are forced to stoop, because the Rock hangs sloping so low; but having

passed this Place, and a Brook adjoining (which is not to be waded sometimes) the Arch opens it self again, and brings you to a second Current, with large Banks of Sand in and by it. This Current is passable, but in a little Time you come to a third Current that is impassable, and then the Rock closes.

This gate being become ruinous, was rebuilt in the year 1617. The north side of it is adorned with the figure of king *James I.* on horseback in *relievo*, in the same posture that he came into *England*, and made his publick entry into *London* through that gate. On each side is a niche; in which are the figures of the prophets *Jeremiah* and *Samuel*; *Jeremiah* on the east-side, and *Samuel* on the west; with references to *Jeremiah*, the 17th chapter and 25th verse, *Then shall enter into the gates of this city, kings and princes sitting upon the throne of David, riding in chariots and on horses, they and their princes the men of Judah, and the inhabitants of Jerusalem and this city, shall remain for ever.* And the 12th chapter of the 1st book of *Samuel* and 1st verse, *And Samuel said unto all Israel, behold, I have hearkened unto your voice, in all that ye have said unto me, and have made a king over you.*

This gate was new built in the year 1609; upon the top of the gate eastward, stands a fair golden sphere with a vane on it. On the upper battlements are two ancient soldiers, each holding a stone ball in his hand, as denying entrance to any bold enemies. Beneath in a large square, stands the figure of king *James I.* in gilt armour; at his feet on one side is a golden lion, and on the other side an unicorn chain'd and couchant; the first is the supporter for *England*, and the unicorn for *Scotland*: Their being in a couchant posture is an emblem of the union of the 2 kingdoms, as also it denotes their awe and humility in the presence of so great a prince. On the west-side of the gate, the highest of all, is the figure of fortune gilt with gold, standing upon a maund or globe, with a prosperous sail spreading over her head, and looking pleasantly on the city. Beneath this figure in a large square, are placed the king's arms somewhat lower, and to grace each side of the gate, are placed 2 female figures, the one the emblem of *Peace* with a dove upon one of her hands, and a gilded wreath or garland in the other; and on the north-side stands the figure of *Charity* with a child at her breast, and another in her hand, implying where *Peace*, *Love* and *Charity* prosper, and are embraced, that city shall be happy. BISHOP'S-GATE takes its name, as is supposed, from some bishop of *London*, and probably from *Erkenwald* son of king *Offa*, and bishop of *London*, who died in the year 685; and there being the effigies of two bishops on this gate, as *Erkenwald* might be the founder of it, so it is very probable that it was repaired by *William the Norman*, who was bishop of *London* in the time of *William the Conqueror*; both of which were great benefactors to the city.

Over the gate-way, on the south and north sides of the gate, are figures in stone perhaps of the greatest antiquity of any now remaining in the city, being probably as old as the gate, that is, about 300 years.

The stone figure of a bishop on the south-side, which stands high, has a long beard, eyes sunk and an old mortified face, the mitre on his head, but both his hands beat or worn off by time. On the north-side of the gate is another figure of a bishop of a larger size, mitred, clothed in his *Pontificalibus*, his left hand with the crozier broken off, the right hand blessing with the two fore-fingers, his face smooth, and was probably the courtly bishop *William the Norman*, the favourite of *William the Conqueror*, and the other is probably *Erkenwald* who liv'd 400 years before him. Also on the north-side of the gate on each side of the bishop, but something higher, are two ancient stone-images; on his left hand a *Saxon* king, very probably king *Alfred*, who repair'd the city after the *Danes* had burnt it, and the other probably his son-in-law *Alfred* earl of *Mercia*, to whom he committed the custody of it. Others, as *Camden*, *Verfegan*, &c. derive it from *angulus* an angle, corner or narrow neck of land, their ancient country near *Sleswick*. Mr. *Sammes* deduces it from *ANG* or *ENG*, which in the *Teut.* signifies a narrow or streight place, and hereupon concludes that the *Angeli* or *Angli* were so called, because they inhabited the streight passages in the mountainous parts of *Germany*, and to confirm it, alledges that *Angleven* in *Pomerania* was so named from the angles that are situated in such narrow passes. Others derive the name from *Ingo* or *Engo*, a son of *Woden*, the great progenitor of the *Engliſh-Saxon* kings. The posterity of which *Ingo* were called *Inglingar* or *Inglings*, who seems to have been made by his father, king of that part of the *Suevi*, which afterwards from their first king called themselves *Ingliſch* or *Inglings*; and it is certain that the *Byzantine* historians, *Nicetas* and *Codinus*, call the *Angli*, *Ἰνγλῖνοι*, *i. e.* *Inglini* or *Inglins*.

It is certain from history, that this stone has been there ever since or before the conquest, which is now near 700 years; but the exact time is unknown, and so also is the reason of its being placed there; some are of opinion, that it was set up as a precise place to begin to measure their miles, from this city to the other parts of the nation; others, that it was set for a mark of the middle of the city within the walls. And whereas this street was anciently the chief street of *London* (as *Cheapside* now is) some are of opinion, that this stone was a place on which the person stood, who published proclamations, and gave publick notices of things to the citizens; others again are of opinion, that the stone was set up there, as a place for the rendering and making payments by debtors to their creditors, at their appointed days and times, till in after-times payments were more usually made at the four in *Pont's* church (probably *Paul's* church) and now usually at the *Royal Exchange*: others again are of opinion, that it was set up by one *John* or *Thomas*, &c. *Londonstone*, who dwelt over-against it.

QUÆDAM ERRATA TYPOGRAPHICA.

IN ADENOGRAPHY, for *treaty* read *treatise*. In *natural* AGENTS after the word *produce* add one sort of effect with an incapacity to produce. In ALFET after *tryal* of dele *an*. In ANATASIS instead of *our* read *or*. In ANEMOSCOPE after *Air* add *or wind*. In ANGINA instead of [with Surgeons] read [of ἀγγεῖν Gr. to strangle or suffocate]. In ANNO DOMINI instead of *from the date* read *in the date*. In ANTACIDA leave out the word *like*. For ANTIPASIS read *Antispasis*. In APODIOXIS leave out *any*. For *Theatrical* ARITHMETICK read *theorical*. For *numerous* ARITHMETICK read *numeral*. In Dyadic ARITHMETICK leave out *decade*. In ASSEMBLEE for *Line is being* leave out *is*. For AUDIENDO and *determinando* read *terminando*. In ANECDOTE add [of ἀνέκδοτῶν not published]. In APOLOGY [ἀπολογία of ἀπολογία read *or* ἀπολογίαμαι I refute or gainsay] an excuse or defence, a discourse or writing in defence of a person. For CONSPITRATIONE read *conspiratione*.

In the Dedication in Page 2 line 19 for *never* read *ever*. These errors are what, for want of opportunity before the publication, I have observ'd, but doubt not but that there are many more (as in a work of this bulk and variety, may reasonably be expected) which, however I hope, are neither so many nor so great, but that the candid reader, as they occur, will be able to correct, and impute rather to the precipitancy of the press, than to the negligence of the author.

The construction and use of *Nepier's Bones* happening to be omitted in their proper place, it is inserted here.

They are rods, Plates, or *Lamellæ* of wood, metal, paste-board, or other matter of an oblong form (as in the table) and each divided into 9 little squares; each of which is resolved into two tables diagonally.

In these little squares are written the numbers of the multiplication table, in such order as that the units, or right hand figures, are found in the right hand triangle, and the tens on the left hand figures in the left hand triangle; see the table.

The use of them in multiplication.

To multiply any given number by another; dispose the *Lamellæ* in such order, that the top figures may exhibit the multiplicand, and then join the *Lamellæ* of units on the left hand, in which seek the right hand figure of the multiplier; and write out the other numbers which correspond to it in the squares of the other *Lamellæ*, adding the several numbers which occur in the same Rhumb together and their sums. And after the same manner write out the other numbers which correspond to the other figures of the multiplier; and dispose them under one another as in the common Multiplication; and then add the several Numbers into one sum.

As for Example,

If 6123 is to be multiply'd by 356, having tabulated the multiplicator, the several products thereof into each figure of the multiplier you are directed to by the Index; which being added together (respect being had to the due placing their sum) is 2179788, which is the product of 6123 by 356.

$$\begin{array}{r} 6123 \\ 356 \\ \hline 36738 \\ 30615 \\ 18369 \\ \hline 2179788 \end{array}$$

The Use of *Nepier's Bones* in Division.

Dispose the *Lamellæ* so that the uppermost Figures may exhibit the divisor, to these join the *Lamellæ* of units on the left hand. Descend under the divisor till you come to those figures of the dividend, wherein it is first required how oft the divisor is found, or at least the next less number, which is to be subtracted from the dividend, and write down the number corresponding to this in the place of units for a quotient. Determine the other parts of the quotient after the same manner, and the division will be completed.

As for Example,

Thus, if 2179788 is to be divided by 6123, it will give in the Quotient 356.

Having dispos'd the *Lamellæ*, or tabulated the divisor 6123, I see that 6123 cannot be had in 2179; therefore I take 5 places, and on the rods finding a number that is equal, or next less to 21797, which is 18369, that is, 3 times the divisor; set 3 in the quotient, and subtract 18369 from the figures above, and there rests 3428; to which add 8, the next figure of the dividend, and seek again on the rods for it, or the next less, which being found to be 5 times, set 5 in the quotient, and subtract 30615 from 34288, and there rests 3673; to which add 8 the last figure in the dividend, and finding it to be 6 times the divisor, set 6 in the quotient.

$$6123)2179788(356$$
